This book should be returned on or before the date last stamped below. An overdue charge of one anna will be charged for each day the book is kept overtime.

A THIRD JOURNEY OF EXPLORATION IN CENTRAL ASIA, 1913-16.

Sir Aurel Stein, K.C.I.E., D.Sc., D.Litt.

ABUNDANT as were the results brought back from the journey which during the years 1906-08 had carried me through the whole length of Eastern Turkestan and portions of westernmost China and Tibet, they could not keep my eyes long from turning towards plans of another Central-Asian expedition. It was not the mere "call of the desert"—strongly as I have felt it at times—but the combined fascination of geographical problems and interesting archaeological tasks which drew me back to the regions where ruined sites long ago abandoned to the desert have preserved for us relics of an ancient civilization developed under the joint influences of Buddhist India, China, and the Hellenized Near East. I well remembered the openings for fruitful exploratory work which, on my previous travels, disproportion between the available time and the vast extent of the ground had obliged me to pass by, and I was anxious to secure these chances afresh while I could still hope to retain the health and vigour needed successfully to face the inevitable difficulties and hardships.

The arrangement of the large collection of antiques which I had brought to the British Museum from my former expedition, and the multifarious efforts which I had to organize and direct for their elucidation, helped by a staff of assistants and numerous expert collaborators, kept me busy in England until the very end of 1911. Work on the big publication which was to record the scientific results of that journey still continued to claim most of my time after I had returned to duty on the Archaeological Survey of India, on the familiar ground of the North-West Frontier and Kashmir. That heavy task was not yet completed when in the autumn of 1912 a variety of considerations induced me to submit to the Indian Government my formal proposals for the long-planned expedition, by which I wished to resume my geographical and archaeological explorations in Central Asia. Among these considerations regard for the favourable political conditions then actually prevailing in respect of the regions to be visited played an important part. In this connection I have reason to remember gratefully the shrewd advice by which two kind friends, Sir

* Read at the Meeting of the Royal Geographical Society, 5 June 1916. Reprinted from the *Geographical Journal* for August and September, 1916.

Henry McMahon, then Foreign Secretary to the Government of India, and Sir George Macartney, H.B.M.'s Consul-General at Kashgar, helped me to decide for an early start.

The kind interest shown by H.E. Lord Hardinge, then Viceroy of India, in my past labours and in my new plans had from the first been a most encouraging augury. My gratitude for this help will be life-long. With it accorded the generous support which the Government of India in the Education Department, then under the enlightened direction of Sir Harcourt Butler, extended to my proposals. This included the payment in three successive years of a total grant of £3000 to cover the cost of the intended explorations, the Indian Government reserving to themselves in return an exclusive claim to whatever "archæological proceeds" my expedition might yield. It was understood that the new Museum of Indian Art and Ethnography planned at Delhi would be the first to benefit by prospective "finds."

For the geographical tasks, which formed a large and essential part of my programme, the ready assistance secured from the Indian Survey Department was of the utmost value. To Colonel Sir Sidney Burrard, Surveyor-General of India, I owed already a heavy debt of gratitude for the very effective help he had rendered towards securing and publishing the survey results brought back from my former journeys. He now kindly agreed to send with me my experienced old travel companion, Rai Bahadur Lal Singh, Sub-Assistant Superintendent of the Survey of India, and to make available also the services of a second surveyor of his department, Muhammad Yakub Khan, along with all necessary equipment and a grant to cover their travelling expenses. Thus the wide extension of our proposed fresh topographical labours was assured from the outset. For my geographical work I found also an asset of the greatest value in the moral support which the Royal Geographical Society generously extended to me, besides granting the loan of some surveying instruments. During the weary months of preparation, with all their strain of work and anxiety, and afterwards into whatever solitudes of mountains and deserts my travels took me, I never ceased to derive true encouragement from the generous recognition which the Society had accorded to my former efforts to serve the aims of geographical science. Nor can I omit to record here my deep sense of gratitude for the unfailing sympathy and friendly interest with which in their ever-welcome letters Dr. Keltie and Mr. Hinks, the Society's Secretaries, helped to cheer and guide me.

After having passed a Kashmir winter and spring over incessant work on *Serindia*, the detailed report on the scientific results of my second journey, there arrived by the middle of May the Secretary of State's eagerly awaited sanction for my expedition. Relying on the kind consideration which my plans had so often received before at the India Office I had ventured to anticipate, as far as I safely could, a favourable decision, and the lists of orders, etc., for the multifarious equipment needed were ready. Yet it

cost no small efforts to assure the completion of all the varied preparations within the short time available, considering how far away I was from bases of supply and friends who could help me. A careful survey of all the climatic and topographical factors determining the programme of my movements had convinced me that I could not safely delay my start across the mountains northwards beyond the very beginning of August. So the weeks which remained to me in the peaceful seclusion of my beloved Kashmir mountain camp, Mohand Marg, 11,000 feet above the sea, saw me hard at work from sunrise till evening. By July 23 I moved down from its Alpine coolness to the summer heat of the Kashmir Valley in order to complete our final mobilization at Srinagar in the spacious quarters which the kindness of my old friend, Mr. W. S. Talbot, had conveniently placed at my disposal for those last busy days in civilization.

There I had the satisfaction to find Rai Bahadur Lal Singh, my trusted old companion, duly arrived with all the surveying equipment, which included this time two 6-inch theodolites, a Zeiss levelling set, a Recce telescopic alidade and two mercurial mountain barometers, besides an ample supply of aneroids, hypsometers, plane-tables, prismatic compasses, etc. With him had come the second surveyor, a young Pathan of good birth, with manners to match, and that excellent Dogra Rajput, Mian Jasvant Singh, who had accompanied every survey party taken by me to Central Asia. In spite of advancing years he had agreed to act once more as the Rai Sahib's cook, and to face all the familiar hardships of wintry deserts and wind-swept high mountains. At Srinagar I was joined also by two other Indian assistants, who, though new to Central-Asian travel, proved both excellent selections for their respective spheres of work. In Naik Shams Din, a corporal of the First (King George's Own) Sappers and Miners, whom Colonel Tylden-Pattenson, commanding that distinguished corps, had chosen for me after careful testing, I found a very useful and capable "handy man" for all work requiring technical skill. A Punjabi Muhammadan of Kashmiri descent, he proved in every way a worthy successor to Naik Ram Singh, whose devoted help on my second journey I owed to the same regiment, and whose tragic end I have recorded in *Desert Cathay*.

The other assistant, Mian Afrazgul Khan, a Pathan of the saintly Kaka-khel clan, and a Sepoy from the Khyber Rifles, was my own choice, and experience soon showed how much reason I had to be pleased with it. Originally a schoolmaster on the Peshawar border, with a sound vernacular education, he had soon after his enlistment in that famous Frontier Militia Corps been noticed for his topographical sense and superior intelligence. After a year's training in the Military Surveyors' Class at Roorkee, where he greatly distinguished himself, he was permitted by Sir George Roos-Keppel, Chief Commissioner, N.-W. Frontier Province, and Honorary Colonel of the Regiment, to join me as temporary draftsman and surveyor in connection with the excavations I was carrying on in the

spring, 1912, as Superintendent of the Frontier Circle, Archæological Survey. There I was soon impressed by his marked and varied ability, and when in addition I became aware of his energy and genuine love of adventure I did not hesitate to engage him as an assistant surveyor for the journey. Our small party was completed by two Indian servants; one of them, Yusuf, a man of somewhat "sporting" instincts, was to act as my cook, and the other, Pir Bakhsh, a worthy elderly person from the mountains north of Kashmir, as his substitute in case of illness—or some temporary outbreak of bad temper. The experience of previous journeys had warned me as to the necessity of this double string, and I owe it probably to its restraining influence that I was able to retain the services of both men in spite of all trials and bring them back to their homes in the end safely and in a state of contentment.

Ever since the plan of my journey was first formed I had been exercised in my mind by the difficulty of finding a practicable route which would take me across the great mountain barriers northward to the border of Chinese Turkestan on the Pamirs, and which was still new to me. By the initial portions of my previous journeys I had exhausted the only apparent alternatives of the Chitral and Hunza valleys leading to practicable crossings of the main Hindukush range. Even the devious route over the Karakoram passes I had seen on my return journey of 1908. But fortune seemed to favour me at the start, and unexpectedly to open for me the eagerly desired new approach to my goal.

For long years I had wished to explore the important valleys of Darel and Tangir which descend to the Indus from the north some distance below Chilas. Darel (*Ta-li-lo*) is prominently mentioned in the accounts of old Chinese Buddhist pilgrims, partly because there passed through it a route which some of them followed on their descent from the uppermost Oxus to the Indus and the sacred sites of the Indian north-west frontier, and partly by reason of a famous Buddhist sanctuary it once contained. No Europeans had ever been able to visit these territories, as the disturbed political conditions of the local tribal communities, coupled with their fanatical spirit, effectively closed access to them. But in recent years Raja Pakhtun Wali, of the Khushwaqt family, once ruling Yasin and Mastuj, had, after an adventurous career, succeeded in founding and gradually extending a chiefship of his own among these small Dard republics. The desire of consolidating his rule and securing support for his children's eventual succession had led him a short time before to seek friendly relations with the Gilgit Political Agency. When I learned of the opportune chance thus offering I decided to use it for a new route to the Pamirs. The matter needed diplomatic handling. But finally the effective help given by my kind friend the Hon. Mr. Stuart Fraser, Resident in Kashmir, with the assent of the Indian Foreign Department, secured for me the chief's permission to visit his territories. The conditions he thought fit to attach to it were obviously meant to safeguard

his political interests—and incidentally also my safety among his newly won subjects.

On 31 July 1913 I started from Srinagar, and proceeding by boat down the Jhelam, reached next day the little port of Bandipur on the Wular Lake. From there the bulk of our baggage was sent ahead with the second surveyor by the Gilgit military road to await us in Hunza. I myself with Lal Singh and Afrazgul left Kashmir through the side valley of the Lolab and struck north-westwards for the route which leads through the deep-cut gorges of the Kishanganga and its tributaries to the snowy passes of Barai and Fasat and then down to Chilas on the Indus. Bad weather pursued us from the time we entered the mountains, and even on the first eight days the tracks followed proved in many places impracticable for laden animals. But it seemed appropriate Alpine training for the ground ahead, and there was an antiquarian interest to compensate me for the fatigues encountered; for various topographical considerations indicate that it was by this direct route to the Indus and thence to Gilgit that the Chinese received those annual supplies from Kashmir which alone, according to an interesting historical document preserved in the Annals of the T'ang dynasty, enabled them about the middle of the eighth century A.D. to maintain for some years imperial garrisons in Gilgit and Yasin. Thereby they prevented the junction between their great adversaries who then threatened Chinese hold on Turkestan—the Arabs in the west and the Tibetans in the south. It was, of course, the human beast of burden which alone made the use of such a route possible, and we have historical evidence to show how abundant its supply was in ancient Kashmir.

By August 10 we had descended from the snowy range which culminates eastwards in the huge ice-clad pyramid of Nanga-parbat (26,620 feet above the sea) to Chilas on the Indus, the last British post towards the independent territory of Dard tribes, known as the Indus Kohistan. The *Pax Britannica*, brought some twenty years before to what was once the most turbulent and fanatical of these petty hill republics, had worked curious changes in the position of the cultivated areas, etc., which without definite records a future antiquarian or geographer would find most difficult to interpret correctly. The heat of the summer is great in the deep-cut rock defiles of the Indus, and the banks forbiddingly barren. So I was glad when our descent in the Indus gorge next day could be effected on a skin raft which the tossing current of the mighty river carried down at the rate of some 14 miles an hour. Though the snowy weather prevailing on the high ranges had caused the river to fall to some 24 feet below high-water level, yet the flood volume was still large enough to allow us to sweep down securely over what at other times is a succession of impassable rock ledges and rapids.

At the mouth of the Hodur stream we left the Indus behind and entered ground which offered ample scope for exploring work. Passing up the unsurveyed valley northward we found plentiful ruins of small

fortified villages clearly dating back to pre-Muhammadan times and a great deal of abandoned cultivation terraces for which the supply of irrigation water now available would manifestly no longer suffice. Pushing up to the Unutai Pass we crossed the range which overlooks the Khanbari River and there reached the eastern border of Pakhtun Wali's latest conquests. As we descended westwards through the Datsoi Nullah by a track almost impassable for load-carrying men we were met by Pakhtun Wali's capable nephew, Mehtarjao Shah Alim, with a large and well-armed escort. It had been stipulated beforehand that not a single man from the territory under control of the British Agency of Gilgit was to accompany us. The careful watch kept over us from the start by Pakhtun Wali's select men-at-arms, wherever we moved or halted, seemed to afford adequate protection from any fanatical attempt on the part of less trustworthy elements among his new subjects who might have liked to embroil him by an attack upon us. But I confess that it also at first caused me serious misgivings as to the freedom which might be left to us for useful topographical work.

It was quite as much regard for such work as the wish to avoid the excessive summer heat of the Indus gorges which had caused me to ask that we might be taken to Darel by the mountains at the heads of the Khanbari and Dudishal Valleys instead of the usual route, which leads through the former. It proved a difficult line of progress, even with such hardy porters for our baggage as Shah Alim had brought from the main Darel Valley. But its advantages for surveying operations were great, and fortunately I soon found that we were left full freedom to use them. The great spurs descending from the Indus-Gilgit watershed northward had to be crossed by a succession of high passes, between 13,000 and 14,000 feet, and these furnished excellent plane-table stations. The extensive views there obtained towards the great snowy ranges across the Indus and westwards on the headwaters of the Swat River permitted our positions to be fixed with accuracy from previously triangulated peaks. At the expense of much hard climbing we secured equally favourable conditions further on, and a protracted spell of fine weather made it easy to use them. R. B. Lal Singh, in spite of his fifty-one years, an age which Indians usually are apt to count as advanced, showed that he had lost none of his old zeal and vigour. Through his devoted exertions a fortnight's hard travel sufficed to map some 1200 square miles, on the scale of 2 miles to the inch, on ground which had never been surveyed or even seen by European eyes.

It was a pleasant surprise to find our tasks soon facilitated by the excellent relations we were able to establish with Mehtarjao Shah Alim and the band of Pakhtun Wali's trusted supporters who formed our ever-watchful guard. They were a strangely mixed crew, of distinctly shady antecedents, but all "handy" and pleasant to deal with. Most of these alert fellows were outlaws from Swat, Chitral, and the independent Dard republics on the Indus, who, with hands already blood-stained, had joined

Pakhtun Wali's fortunes at one time or other of his adventurous career. Their burly fair-haired commander Shahid, whose look of jovial ruffian curiously contrasted with his name, meaning "martyr," had from the beginning played a prominent part in all the mixed feuds and intrigues by which their capable chief had raised himself from the position of a hapless refugee in Tangir to that of absolute master of that once turbulent valley. The means and methods by which Pakhtun Wali, in true Condottiere fashion, had subsequently extended his sway over the neighbouring hill republics of Darel and Sazin, had been equally unscrupulous, and recalled times long gone by elsewhere. His was the most recent kingdom carved out in the Hindukush, a region probably less touched by historical changes than any other in the north-west of India, and to glean first-hand information about the process employed was for me a very instructive and fascinating occupation. Nor did quick-witted Shah Alim and his band of intelligent henchmen fail me when it came to collecting exact data about local resources, population, etc., or raising or managing needful transport. Fully familiar with the ground, as their employment had made them, they yet kept a mental detachment from the local interests, regard for which would have induced reticence among more settled subjects.

The Khanbari River was found to drain an unexpectedly large mountain area, and in all the valleys splendid forests of pines and firs, quite untouched by the axe, were found to clothe the higher slopes. In the wider portions below old cultivation terraces, now abandoned, could be traced for miles. Judging from the size of the trees, the forest which has overrun them in most places dates back for centuries. There is an abundant supply of water for irrigation from snowbeds and springs, and re-occupation of these fertile lands is retarded only by the great scantiness of population. Before Pakhtun Wali's conquest the Darelis had contented themselves with using the extensive grazing-grounds at the very head of the valleys, and only since the advent of more peaceful conditions has the slow immigration of Gujar settlers commenced. Whatever the cause of the original abandonment of these valleys may have been, it soon became obvious that they, like Darel and Tangir, enjoyed climatic conditions far more favourable in the matter of adequate rainfall than those prevailing higher up on the Indus or elsewhere between the Indus and the Hindukush. This abundant moisture may well be due to some feature in the orography of the Indus Valley, permitting the monsoon rains to advance here far beyond the line where their effect is stopped elsewhere by the high mountain chains southward.

The contrast with those denuded barren mountains to the north and east, which I remembered so well from my previous routes through Giigit and Chitral, became even more striking as we descended from the Ishkōbar Pass (*circ.* 13,650 feet) to the head of the main Darel valley. When encamped there at Nyachut, on rich Alpine meadowland and surrounded by mountain sides which magnificent forests of deodars and firs clothe for

thousands of feet in height (Fig. 1), I felt as if transported to the Sind or some other big side valley of Kashmir. Unfortunately there was little chance left to enjoy the delights of this glorious Alpine scenery while being constantly attacked by swarms of the particularly fierce mosquitoes which infest all Darel and Tangir. We met them first when approaching the Khanbari watershed from the east, and the trouble they gave steadily increased as we progressed. Even high up in the mountains we suffered severely from this plague which is apt to cause bad sores, as my surveyors and myself soon found by experience. There was little consolation in the fact that the local people suffer almost as much from the infliction, as their pock-covered skin showed, and that during the winter these tormentors descend to seek warmer quarters by the Indus. I often wondered whether their presence would not be an adequate defence of Darel against any permanent invasion by people concerned for their comfort.

When I moved down to the vicinity of Manikyal, the northern of the two extant walled townships of Darel, there revealed itself strikingly the remarkable openness of the main valley and the great extent of arable land on the wide plateaus flanking the middle course of the Darel River. The sight of this fertile area, all easy to irrigate, revealed at a glance the importance which Darel must have possessed in ancient times, and which with an adequate population and under a firm rule it could attain once more. But much of the land had passed out of cultivation long ago, and the great number of ruined sites gave striking confirmation of the observation. The survey of these ruins, all known as *kots* (forts), kept me busy for several days, and showed that most of them were remains of fortified settlements dating back to pre-Muhammadan times. Rapid excavation near one of them, Bojo-kot, brought to light unmistakable relics of a Buddhist burial-ground in the shape of cinerary urns, metal ornaments, etc. These ruins always occupy naturally strong rocky ridges bearing elaborately built terraces, and by their position and constructive features curiously recalled to my mind the extensive ruined settlements of the Buddhist period with which my explorations in the Swat Valley and on the Peshawar border had rendered me familiar. Archaeological evidence thus seemed to bear out the tradition preserved in the Chinese pilgrims' records as to the early historical connection between the ruling families of Darel and Swat.

All antiquarian observations pointed to the territory having been occupied in Buddhist times by a much denser population than the present and one possessed of far greater material resources. Yet even now Darel contains a number of large crowded villages, some, like Manikyal and Samagial, well deserving to be called towns. Again and again I was struck by lingering traces of an inherited civilization a good deal more developed than that to be found now in the neighbouring hill tracts. Thus the alignment of the irrigation canals and the carefully preserved solid stonework of the terraces and embankments over which they are

FIG. 1.—FOREST NEAR NYACHUT, HEAD OF MAIN DAREL VALLEY, LOOKING N.W.

WEST ACROSS ASHKUMAN RIVER.

carried showed unusual skill. Another very significant feature was the abundance in houses, mosques, and graves of fine wood-carving retaining decorative motifs which are directly derived from Græco-Buddhist art as known to us from the ancient reliefs of Gandhara, and which occur frequently also in the ornamental wood carvings excavated by me at sand-buried old sites of Chinese Turkestan.

The racial type of the Darelis (Fig. 2), as far as I could judge without anthropometric observations, for the collection of which there was no time, seemed to me unmistakably akin to that of the other Dard tribes which occupy the adjoining mountain territories. This close relationship is also borne out by their Shina dialect. But there was something in the often refined features of the men, and their less heavily built frame, which vaguely suggested inheritance from generations weakened by a decadent civilization and a long period of internal disorder. They struck me distinctly as a race possessing the instincts of quasi-town-bred folk and needing a strong ruler.

On the evening of August 16 I was received by Raja Pakhtun Wali in full state at the castle of Gumarc-kot, which he was building in the centre of his recently annexed territory and as a stronghold to safeguard its possession against possible risings. The steep ridge which rises above it is occupied by the ruins of the large fort of Raji-kot, marking the ancient capital of Darel. It was a very interesting experience to meet the man who, after a career as chequered as befitted the son of Mir Wali, Hayward's murderer, had succeeded in building up a new kingdom for himself, the last, perhaps, which India has seen raised on the old adventurous lines. His human environment, in which Darelis are still kept much in the background, and the methods by which he maintains his rule seemed to call up times long gone by. There was much to claim my interest in what I heard from the shrewd and energetic Khushwaqt chief that evening, and during the long visit he paid me next morning with his two young sons; but this is not the place to record it. He had spared no care nor trouble to facilitate my safe journey through his territory and to make it as profitable as the limitations of my time permitted. I shall always look back with gratitude to the friendly welcome accorded, and with genuine interest and sympathy to the ruler.

It was a special satisfaction to me that on my way down Darel I was able to identify at Poguch the site of an ancient Buddhist sanctuary which the Chinese pilgrims specially mention on account of its miracle-working colossal image of Maitreya Buddha in wood. The tomb of Shahakhel Baba, a Muhammadan saint renowned for his miraculous powers and attracting pilgrims from many distant parts of the Hindukush region as well as Swat and the Indus Valley, attests here the continuity of local worship. Lower down we passed interesting ruins of castles once closing access to Darel. Then we ascended westwards by a precipitous track, difficult for load-carrying men, to the rugged high spur which divides

Darel from Tangir. On reaching its top we were rewarded for a trying climb over bare rock slopes by the grand vistas which opened before us. Owing to its isolation the Shardaī Pass commands wide views of Darel, Tangir, the Indus Valley, and the ranges beyond, and proved a truly ideal survey station. To the west there showed clearly the gap between precipitous snow-capped spurs, where the Indus makes its sharp bend to the south. Access to this famous defile, where the bed of the mighty river is reported to contract into an exceedingly narrow rift, is closed by independent tribal territory. Even from afar European eyes saw it now for the first time. How I wished that Pakhtun Wali's expansionist policy might open the route some day for exploring those Indus gorges, where the old Chinese pilgrims made their way south by dreaded rock ledges and "iron chains suspended across chasms" !

The descent to the Tangir River over cliffs and vast slopes of rock débris was a trying experience ; but the valley itself proved remarkably open and fertile. Fruit trees and vines were more plentiful than in Darel, and the mosquitoes a little less fierce. The population is scattered in clusters of hamlets, and showed a manly bearing. Of those fortified villages in which the Darel people seem to have always sought shelter since early times I could trace no ruins here. I had a very pleasant reception at Jaglot, where Pakhtun Wali had established his original stronghold, and where his family ordinarily resides. The original modest structure which he occupied as a refugee from Chitral had witnessed a memorable siege by the powerful Gabar-khel tribesmen who hold the upper portion of Tangir, and who then vainly tried to rid themselves of their ambitious exile-guest. Their defeat marked the first stage in Pakhtun Wali's rise to power. The old animosities seemed to be still smouldering here, and as we moved up the valley our ever-watchful escort took special care to safeguard us from any attempt of Pakhtun Wali's old foes, or the fanatical *talib-ims*, or religious students, gathered in numbers round a famous Mullah at the mosque of Kami.

In the great forest belt at the head of the Satil branch of the valley hundreds of Pathans from Upper Swat and the independent tracts lower down the Indus were engaged in cutting the magnificent timber, an important source of revenue to Raja Pakhtun Wali. The timber is made to float down the Indus under arrangements with Kaka-khel traders, who, owing to the sanctity enjoyed by their clan, are able to exploit this business in tracts otherwise far too risky. Here we were joined by Mian Shahzada, the uncle of Afrazgul, my Kaka-khel surveyor, who for years had been in charge of these operations, and whose opportune intercession had helped to overcome the Raja's original scruples about our passage. Shahzada had charged himself with the responsibility of keeping all fanatical characters in these woodcutters' camps out of mischief, and by his effective help amply earned the recommendation I could give him to the district authorities of his far-off home on the Peshawar border.

All arrangements worked smoothly to the end, and when on August 21 we safely reached the Sheohat Pass, over 14,000 feet in height, on the range which forms the watershed between the Indus and the Gilgit River drainage, it was with regret that I left behind Pakhtun Wali's fascinating dominion, from which we had just "lifted the Purdah." I was sorry to bid farewell to our hardy escort of outlaws, after meeting the large *posse* of respectable Gilgit levies which had waited on the other side of the pass to take charge of us. It was amusing to watch the ill-disguised expression of distrust with which the latter viewed our quondam protectors, some of them well remembered, no doubt, from their old raids and similar exploits. The ample and richly deserved rewards I gave to Pakhtun Wali's men, however, sufficed to efface any unpleasant reciprocal feelings.

In order to reach the big Yasin Valley through which our northward route was to lead, we had first to gain the Gupis post on the Gilgit River. The mountains to the south of the latter have not yet been adequately surveyed. So it was scarcely surprising that the unexplored pass above Gafarbodo, which I chose as a short cut, proved nearly impossible for our load-carrying men. It took fully eight hours' scrambling over huge masses of rock debris left behind by ancient glaciers, the worst I ever encountered in this region, to reach the pass at an elevation of close on 16,000 feet.

Then I pushed up rapidly in the open and relatively fertile valley of Yasin. It leads due north, flanked by mighty spurs which descend from the glacier-crowned main Hindukush range, and has always been an important route, as it forms the nearest connection between Oxus and Indus. I found myself thus on ground claiming distinct historical interest, and there was a good deal even in things of the present to attest the strong Central-Asian influence to which it has been subject since early times. In addition to much fine old wood-carving in dwellings and mosques, I was able to trace a ruined Stupa with relics of Buddhist times and the remains of several old forts, which tradition significantly enough connects with early Chinese invasions.

It was owing to an early and historically well-attested Chinese conquest of these valleys from the uppermost Oxus that I felt a special interest in the glacier pass of the Darkot by which we crossed on August 29 to the headwaters of the Yarkhun or Mastuj River. It had been the scene of that remarkable exploit by which a Chinese force, despatched in 747 A.D. from Kashgar against the Tibetans, had effected its entry into Yasin and Gilgit. Already in May 1906, on my way up from Chitral, I had been able to ascertain how closely the topographical features of the Darkot Pass agreed with the exact account which the Chinese Annals of the T'ang dynasty have preserved for us of General Kao Hsien-chih's famous expedition. I had then succeeded in reaching the top of the pass, 15,400 feet above the sea, from the Mastuj side; but no examination of the southern approach, which also figures in that account, had been possible.

In view of the very serious natural obstacles presented by the glaciers

of the Darkot, Kao Hsien-chih's passage deserves to rank as a great military achievement, like his successful march across the whole width of the Pamirs, with a relatively large Chinese army, which preceded it, and to which I shall have occasion to refer further on. So it was a particularly gratifying find when I discovered an old Tibetan inscription scratched into a large boulder on the track where it ascends by the side of a steep moraine flanking the southern glacier of the Darkot. It is very probable that it is a relic of that short-lived Tibetan advance on the uppermost Oxus which the T'ang Annals record towards the close of the second quarter of the eighth century, and which Kao Hsien-chih's adventurous expedition successfully stopped.

On the top of the Darkot I was met by Captain H. F. D. Stirling, of the 57th (Wilde's) Rifles, then commanding the Chitral Scouts, with fresh transport from the Mastuj side. Thus the descent over the big and much-crevassed northern glacier could be effected without undue risk to men or baggage. I have special reason to feel grateful for the most effective arrangements made by Captain Stirling as I pushed on eastwards after crossing the Darkot. Our easiest route to the Chinese border would have led over the Baroghil saddle to Sarhad on the Oxus and thence across the Afghan Pamirs along the line I had followed in 1906. But apart from the fact that its use would have required the special permission of H.M. the King of Afghanistan, I was anxious to see new ground, and was therefore glad to move now by a parallel but far more difficult route by which westernmost Hunza could be gained from the headwaters of the Yarkhun and Karambar (or Ashkuman) Rivers. This route allowed me to sight the Showarshur branch of the Darkot Glacier, now completely closed by an impassable ice-fall, and to examine more closely the interesting instance of bifurcation by which the glacier above the Karambar saddle discharges its drainage partly towards the Yarkhun or Chitral River and partly into the lake forming the head of the Karambar River (Fig. 5). On its south side the route skirts an almost unexplored region of high ice-clad peaks and big glaciers, and the snouts which the latter have pushed across the gorge of the Karambar River (Fig. 8) together with the huge old moraines encountered in the main valley lower down constituted serious obstacles. They made all the more welcome the friendly help given by Captain Stirling, who, as an expert mountaineer, took pleasure in accompanying me on those four days of hard marching and climbing.

Beyond the Ashkuman River we were met by fresh porters, collected from the settlement of hardy Wakhi immigrants lower down that much-confined valley. The ascent made with them on September 2 to the Chillinji Pass (*circa* 17,400 feet high) proved a difficult task (Fig. 3). The snowy weather prevailing all through August had rendered the very steep snow slopes to be climbed still more trying, and had added greatly to avalanche risks. The pass had not been traversed by any one for a long number of years, and only one old man sent with us had ever been across. So it

was a great relief when after eight hours' toil we safely reached the col, nearly 5000 feet above camp. It offered a grand view over the extensive glaciers which meet at the head of the Chapursan Valley, but the icy gale sweeping it made even a short rest difficult. Fortunately the great glacier below us proved less trying, owing to the fresh snow which had adequately covered up most of the crevasses, and after a descent of five hours more we found a dry spot by its side where we could bivouac in safety under the shelter of a moraine. Some of our coolies did not turn up till next morning, but they had wisely kept moving all through the bitterly cold night. Their safe arrival caused me great relief; and so also did the assurance that my feet, in spite of the loss of toes and the impaired circulation which resulted from my frost-bite accident at the close of the former journey, could stand well thirteen hours' struggle over snow and ice. The snout of the Chillinji Glacier was not passed until after a descent of another four miles in the morning, and a short distance beyond I had the satisfaction to find fresh transport from Hunza awaiting us. The arrangements made weeks ahead through my old acquaintance Humayun Beg, the Wazir of Hunza, had not failed me.

After this experience our progress through Hunza seemed easy. The Chapursan Valley, in spite of the huge moraines which the glaciers south have pushed down into it, contains more stretches of level ground than probably all the rest of Hunza. It was hence a feature of special interest to note the extensive areas of old cultivation which we passed on the 25 miles' march between Baba-ghundi and Spandrinj. Neither want of water for irrigation nor present climatic conditions at this elevation from *circa* 11,000 to 10,300 feet seem to furnish an adequate explanation for their abandonment. Re-occupation is recent and proceeding slowly.

By September 5 we had reached the head of the main Hunza Valley over the Kermin or Rich Pass. Crossing two days later the border of Chinese Turkestan on the Mintaka Pass (15,430 feet) I found myself restored to ground familiar from my two former journeys. But how easy the previously followed routes seemed by comparison with our recent tracks! Since leaving the Kashmir Valley we had crossed altogether fifteen passes between 10,000 and 17,400 feet in height. The total marching distance covered during these five weeks was over 500 miles, and of this nearly four-fifths had needs to be done on foot.

Rapid as was my descent down the Taghdumbash Valley to Tash-kurghan, I could use it for fresh surveys of antiquarian interest. It must suffice here to mention an ancient canal of large size, famous in local lore but abandoned for long centuries, which had once brought fertility to extensive areas along the right river-bank, now almost wholly desert. We could trace its remains, in places remarkably well preserved, for a distance of over 40 miles, from Dafdar to below Toghlan-shahr. There, opposite to Tash-kurghan, still as in ancient times the chief place of Sarikol, I found also ruins of Buddhist shrines which had previously escaped me.

On leaving Sarikol for Kashgar I followed for a couple of days the main carayan route through the mountains. I was here on the track of Hsüan-tsang, the great Chinese Buddhist pilgrim whom ever since my first journey I claim as my patron saint. So it was a special satisfaction when on crossing the high plateau of the Chichiklik Maidan, already under fresh snow, I found conclusive evidence that a badly decayed enclosure, now worshipped as a sacred site by Muhammadans and used as a burial-place for unfortunate wayfarers, represents, as I had previously conjectured, the remains of an ancient hospice which Hsüan-tsang described as a place connected with a sacred Buddhist legend.

Beyond this our routes divided. Lal Singh moved off by rapid marches in order to reach, *via* Yarkand and Khotan, that portion of the main Kun-lun range along which I was anxious to have our triangulation of 1906 extended as far as possible eastwards. My heavy baggage was despatched to Kashgar by the usual route *via* Ighizyar under Afrazgul and Shams Din. I myself set out due north with the second surveyor in order to reach the same goal by a new route, across the Merki Pass and down the valley of the Kara-tash or Beshkan River which receives most of the eastern drainage of the great glacier-clad range of Muztagh-ata. Owing to special difficulties this important valley had never been explored in its whole length. In the spring and summer the narrow gorges of the Kara-tash River are rendered quite impassable by the big floods of the melting glaciers. By the time these floods subside in the autumn, heavy snow on the Merki Pass equally closes the route to traffic. In the spring of 1906 I had sent my late surveyor, plucky Rai Ram Singh, to descend the valley, but his attempt was completely baffled. Chance showed more favour to me now. An exceptional succession of early snowfalls had stopped the melting of the glacier ice just in time to allow of my passage while the Merki Pass (14,500 feet), though deep under snow, could still be traversed with laden yaks. But even thus the descent through the river gorge for two long marches proved a very difficult and in places risky business. The constant crossings of the river tossing between sheer rock walls could not have been safely effected without opportunely secured Kirghiz camels, and none but such hardy local camels accustomed to the ground could have negotiated the boulder-strewn narrow tracks leading elsewhere along the foot of these precipices (Fig. 4).

By September 19 we had safely emerged from the last of these gloomy defiles, and two days later a 40 miles' ride through fertile plains carried me back to Kashgar. There I had the great joy of being received once again, after seven years' absence, by my old and ever-helpful friend, Sir George Macartney, under the hospitable roof of Chini-bagh, now much enlarged and rebuilt as befitted its new dignity as a British Consulate-General. The two busy weeks passed in those familiar cheerful surroundings would certainly not have sufficed for all the heavy work which the organization of my caravan demanded, had not the watchful

care and often proved prevision of my kind host aided me in every direction.

In due course there arrived twelve fine camels from Keriya, accustomed to desert work and selected by Hassan Akhun, my experienced old camel factotum who was now about to embark on the third of our long expeditions into the "sea of sand." Other faithful old Turki followers, too, were glad to take their place again in my caravan. I had been delighted to see again at Kashgar my devoted Chinese secretary and friend, Chiang-szu-yeh, who had proved so valuable on my second journey. Since then he had been rewarded by being appointed Chinese Munshi at the Consulate-General. But notwithstanding this comfortable berth I think he would have been glad to rejoin me had not his increasing years and a serious affection of his ears warned me against accepting the sacrifice and risks which such a step would have involved for my old companion.

Li-szu-yeh, the shrivelled-up weakly young man whom Chiang provided for the post of camp-*literatus*, turned out to be a poor substitute, as I had apprehended from the first. But there was no other choice at Kashgar. Wholly absorbed in the task of treating his ailments, real and imaginary, with every Chinese quack medicine he could lay hold of, and as taciturn and inert as a mummy, Li was useless for the manifold scholarly and practical labours in which Chiang had engaged with such cheery energy. But anyhow he managed to indite my Chinese epistles, and he did not play me false in my dealings with Chinese officials.

For this negative virtue I had reason to feel specially grateful. The revolution of 1911 had greatly changed many aspects of Chinese officialdom even in this distant province, and scarcely for the better. A series of assassinations of Mandarins, and petty outbreaks fomented by unscrupulous office-seekers, had during 1912 seriously disturbed the peace of the "New Dominion," though they were confined to the numerically weak Chinese element, and left the mass of the people, respectable Turki Muhammadans, in their characteristic unconcern. It had been due largely to the wise counsels and moderating influence of Sir George Macartney, who for many years past has enjoyed wide and richly deserved respect among all classes, that the province had escaped complete anarchy. Under the influence of a somewhat stronger régime at headquarters things had become more settled before the time of my return. But it was difficult not to realize that the so-called revolutionary movement in Hsin-chiang had in various respects adversely affected the general type of officials in power. Some of the best qualities of the old local Mandarin world, including regard for scholarly aims and labours, had manifestly been discarded, while the beneficial effect hoped for from "Western learning" and republican methods was still conspicuous by its absence. There was only too much justification for Sir George Macartney's shrewd warning that I could not safely reckon upon finding always the same favourable disposition at Chinese Yamens which had facilitated my explorations so much during previous journeys.

After a stay which reunion with the kindest of friends, Sir George and Lady Marcartney, and the glorious autumn season had combined to render most pleasant, I left the Kashgar Consulate-General on October 9 for my first winter's work in the desert. Its main goal was the region around the dried-up Lop-nor, in the extreme east of the Tarim Basin, and the whole length of the Taklamakan, that great sea of drift-sand over 600 miles in a straight line, separated me from it. A variety of considerations obliged me to revisit Khotan, and once there I was bound to proceed by the only possible route which skirts the southern edge of the Taklamakan. Much of the ground to be traversed there was already familiar to me from my previous expeditions, and for this reason I was all the more eager to use whatever chance of new routes the limits of time left me on my way to Khotan.

This induced me to move first due east to the oasis of Maral-bashi along the foot of the steep and barren mountain chain which forms here the southernmost rampart of the Tien-shan. It had in its main part remained so far unsurveyed; but reports, previously collected, seemed to indicate that an old route, now but vaguely remembered in local lore, had during earlier periods of Chinese domination skirted the foot of that chain and been in use for traffic instead of the present high "road," *recte* caravan track, leading much further south along the actual course of the Kashgar River. The accurate survey now effected confirmed that tradition and proved the existence of a series of small ruined sites scattered along a line of some 160 miles and dating from pre-Muhammadan times. The ground occupied by them on the gentle desert glacis of the hill chain is now wholly without water. There were also other physical observations of interest to be gathered, clearly pointing to desiccation within historical times, and not explainable by the fact that the winding bed and inundation marshes of the Kashgar River were found to have at one period, perhaps relatively recent, approached that desert glacis in places more closely than they do at present. We had met with serious trouble about water, no drinkable supply having been found on three successive marches. This served as a suitable preparation for difficulties to be faced on our desert travel ahead.

By October 18 we were glad to reach the fields and fruit-gardens of Maral-bashi. The survey of some badly injured Buddhist ruins in the vicinity, and of the curious canal system by which the oasis obtains the major portion of its by no means abundant irrigation from the Kashgardarya here approaching its end, occupied me for a few days. But in the main my short stay was taken up with careful preparations for the attempt I planned to make my way to the desert hills of the Mazar-tagh on the lower Khotan River by a short cut through the Taklamakan. I knew well the formidable obstacles and the risks presented by the wide intervening belt of absolutely waterless drift-sand desert. But by sending all baggage, except an absolutely necessary minimum, to Khotan by the caravan route

vid Yarkand ; by reducing in the same way my camp to a few indispensable followers, and keeping most of our fine camels for the transport of water in my six galvanized iron tanks and the very numerous goatskins I had brought from India, I could hope safely to overcome the difficulty about water. The advent of the cold season would help our brave camels to face a long fast from grazing and water.

Apart from the attraction presented by the short cut and the fascination of such a desert cruise, there was an important geographical task to justify the enterprise. Our surveys of 1908 had shown reason for the belief that the Mazar-tagh hills, then traced for over 20 miles into the Taklamakan, belonged in geological structure to an ancient range which started at an angle from the outermost T'ien-shan near Maral-bashi and once extended across the Taklamakan in a south-easterly direction. The way in which the bold island-like hills to the east of Maral-bashi have been carved out and isolated by the manifest action of wind-driven sand prolonged through endless ages left little doubt as to how the continuity of that assumed ancient hill range had been broken up. But only actual survey of the ground could supply definite proof.

On October 25 I left Maral-bashi with six hired camels, all I could secure, to act as a "supporting party" to lighten the loads of our own on the initial stages of the desert journey, and three days later we reached the last of those sand-scoured hills in the desert south-eastwards, known as Chok-tagh. From a lake near it, which inundations from the Yarkand River feed but which we found brackish at its end, Hedin had started in May 1896 on that bold journey through the sandy wastes eastward which ended with the destruction of his caravan and his own narrow escape. Steering a south-easterly course we forced our way for three trying marches into the sea of dunes. Closely packed and steep from the start, they grew steadily higher and invariably rose in a line running diagonally across our intended direction. By the second day all trace of vegetation dead or living was left behind, and an endless succession of mighty ridges, with not a patch of level sand between them, faced us (Fig. 7). The ridges to be climbed soon reached 200-300 feet in height, and progress became painfully slow with the heavily laden camels. Careful levels taken along our track showed an aggregate ascent of some 400 feet over a single mile's distance, with corresponding descents even more trying to the camels.

It was by far the most forbidding ground I had ever encountered in the Taklamakan. By the evening of the third day the hired camels of the "supporting party" had either broken down completely or showed serious signs of exhaustion. Next morning I ascended the highest dune near our camp, and carefully scanning the horizon saw nothing but the same expanse of formidable sand ridges like huge waves of an angry ocean suddenly arrested in movement. There was a strange allurements in this vista suggesting nature in the contortions of death. But hard as it seemed to resist the Syren voices of the desert which called me onwards, I felt

forced to turn northward. Though we men might have struggled through, I should probably have had to incur the needless sacrifice of some of our brave camels which were to be the mainstay of our transport for the winter's explorations, besides the loss of indispensable equipment. It was as well that I took that hard decision in time; for by the third day after there sprung up a violent 'Buran,' which, by its bitter cold, proved most trying even where fuel was abundant, and if met with amidst the high sand ridges would have brought us to a stand-still and caused serious suffering and risks.

Sorry as I was to give up the effort two interesting discoveries had already rewarded it. Again and again we had come between the high dunes upon patches covered with minute but easily recognizable fragments of rock flakes of the wind-eroded hill range once extending right through to the Khotan River. Elsewhere, fully 30 miles from the nearest traceable bed of the Yarkand River, a small belt of eroded ground displayed on its surface abundant remains of the Stone Age, proving occupation by a Palæolithic settlement of what is now absolutely lifeless desert. Neolithic arrow-heads turned up on similar ground nearer to Chok-tagh.

After crossing the Yarkand River behind that hill chain we fortunately secured ponies from a grazing-ground, and were thus enabled to push on rapidly through hitherto unsurveyed tracts of riverine jungle, largely dead, to where, near Gorachöl, the last dried-up offshoots of the Kashgariya bed lose themselves. Thence, with fresh animals, we gained the delta of the Khotan River by a route not previously surveyed. It showed me the great change which, since my passage of 1908, had taken place in the river's terminal course. A series of rapid marches by the Khotan-darya, then completely dry, carried me back to the end of the Mazar-tagh range I had first visited in 1908. There I found the transport and labourers ordered ahead from Khotan duly awaiting me, and was able by resumed spade-work to secure interesting archaeological results at the ruined fort. Besides additional written records of Tibetan times there came to light remains of a Buddhist shrine, immediately below the alleged Muhammadan saints' tombs, from which the desolate desert hill derives its present designation. Thus the continuity of local worship, so important a feature in the history of Asiatic religious beliefs, received another striking illustration.

On November 21 I regained my old haunts at Khotan town, and was cheered by a warm welcome from my old local friends. A brief halt necessitated by manifold practical arrangements was used also to gather such antiques as my old friend the Indian Aksakal Badruddin Khan, now rewarded by the title of Khan Sahib for his help in the past, and others had collected for me from Yotkan, the site of the ancient Khotan capital, and from the desert sites which Khotan "treasure-seekers" are in the habit of annually searching. On November 28 I left the familiar base of my former expeditions to resume the long journey eastwards. There

was still a marching distance of close on 700 miles separating me from Lop-nor, and it was essential for the work planned in that desert region that I should reach it in time while the winter cold lasted and allowed water to be transported in the convenient form of ice.

But rapid as my progress had to be I could not forgo such convenient opportunities for archaeological work as familiar sites near my route still held out. Thus we recovered some interesting fresco remains from the ruin of a Buddhist shrine which had come to light since my last visit in the area of tamarisk-covered cones of sand north of Domoko, near which Hsüan-tsang's *Pi-mo* (Marco Polo's *Pein*) must be located. From the Niya oasis, which was reached on December 9, I revisited the fascinating sand-buried settlement in the desert northward below the pilgrimage place of Inam-Ja'far-Sadik. Abandoned to the desert since the third century A.D., it had yielded plenty of important relics and records in the course of my former explorations. But owing to the deceptive nature of the dune-covered ground and other reasons, it had not been possible to exhaust it completely. It did not disappoint me now either. By a close search of previously unexplored ground to the south-west of the main portion of the ancient oasis we discovered more ruined dwellings of the same early period hidden among the high tamarisk-covered sand-cones (Fig. 9). The employment of a large number of diggers rendered rapid clearing possible also in the case of certain structures which before had seemed too deeply buried in the sand for complete exploration. Thus, apart from furniture, household implements, etc., we recovered a further collection of Kharoshthi documents on wood, written in the Indian language and script which had prevailed in official and Buddhist ecclesiastical use from Khotan to Lop-nor during the first centuries of our era.

It was a particularly curious discovery when, not far from the still traceable dry river-bed, we came upon the remains of a large and remarkably well-preserved orchard, where the carefully arranged rows of various fruit trees and the trellis-carried vines, though dead for many centuries, could be examined in almost uncanny clearness (Fig. 10). It was not surprising to find there also the rafters of a foot-bridge, once spanning the river, still stretched out across its dry bed. It had meant a week's constant work under high pressure, and it was only by the light of bonfires that the final excavation of the large structure was finished, which in 1901 we had called the *Yamên*. It was a curious chance that just its last room, which then had baffled us by its deep sand, proved to contain those "waste papers," i.e. wooden records, of the office, we had before vainly hoped for. It seemed like a farewell gift of the ancient site which I had somehow come to look upon as my own particular estate, and I found it hard to tear myself away from it.

No appropriate return was possible to the dead. But at least I could do something for those living who were nearest. My renewed visit to this ground had allowed me also to make observations of direct geographical

interest concerning changes in the terminal course of the dying Niya River, etc. Among these I had noticed the instructive fact that cultivation at the tiny colony of Tulkuch-köl, established at the very end of the present river-course, below Imam-Ja'far-Sadik's Ziarat, had recently been abandoned, not from want of water, as the usual theory might have suggested, but, on the contrary, owing to a succession of ample summer floods which carried away the canal-head, and with which the locally available labour could not cope. My resumed excavations had brought a large *posse* of able-bodied labourers near the spot. So when I had come back with them from the ruins and was leaving, they were set to work to raise a new barrage across the deep-cut flood-bed, and thus secure water for the little canal, a couple of days' work. As I deposited the small sum needed for their wages with the Mazar Shaikhs, the task was carried through with a will.

From the end of the Niya River I led my caravan through unexplored desert, with high sand ridges in places, and more of salt-encrusted and often boggy ground, to the Endere River. Thence we had to follow the old caravan track to Charchan, which we reached by December 28. It was bitterly cold in the desert, with minimum temperatures down to 50° Fahr. below freezing-point. But there was compensation in the exceptionally clear weather, which allowed us to sight day after day the grand snow-clad rampart of the main Kun-lun range far away to the south. At most seasons it remains quite invisible from the caravan track connecting Charchan with Niya and Keriya. In 1906 numerous peaks on it had been triangulated by Rai Ram Singh, and with their help we could now map our route to Charchan and onwards, far more accurately than had been previously possible.

At Charchan I found the oasis distinctly increased since my last visit, and was able to pick up nine additional hired camels badly needed for the work ahead in the Lop region. But the news received about events which were said to have occurred at Charkhlik, its chief inhabited place, was by no means welcome. A band of Chinese "revolutionaries," *recte* gamblers and adventurers, had a short time before started for that place from Charchan, and was reported to have attacked and captured the district magistrate of Charkhlik, besides committing other outrages *en route*. The Chinese sub-divisional officer of Charchan had been helpless to prevent the outbreak, and was evidently sitting on the fence. He considerably provided me with two introductions for Charkhlik, one to the unfortunate Amban, assuming that by any means he had regained freedom and authority, and the other for the leading spirit of the "revolutionaries," whom he shrewdly guessed to have been installed in office instead of him.

We left Charchan on New Year's Eve, 1914, and did the desert journey to the western border of the Lop district by seven long marches, mainly through the jungle belt on the left bank of the Charchan-darya, which was a route new to me. Splendidly clear weather favoured us, and so did the severe cold, which had covered the river and its marshes with strong ice.

We did not meet with a single wayfarer, which struck me as strange at the time. On approaching the jungle belt of Vash-shahri, an outlying little colony of Lop, we found the route guarded by a large party of armed Muhammádans, who at first mistook us for a fresh batch of "revolutionaries" (many of the Chinese had taken to masquerading in queer European clothes). But Roze Beg, the headman of Vash-shahri and an old acquaintance, soon recognized me. From him I learned the queer story how the little band of "gamblers" from Charchan had captured the hapless Amban, all the local Muhammadans first deserting him, and then looking on with placid indifference when some days later their magistrate was cruelly put to death by the bandits, after having been forced to disclose the place where his official moneys were hidden. The leader of the band had set himself up as Amban *ad interim*, and was duly obeyed by the local chiefs, Roze Beg himself included. Fortunately his régime proved short-lived, and there was no need of my introduction to him either; for within a week a small detachment of Tungan Government troops had arrived from far-away Kara-shahr in the north, under a capable young officer. Stealthily introduced at night into the oasis by the same adaptable Begs, they found little difficulty in surprising the "revolutionaries," most of whom were killed in their sleep and the rest captured. So tranquillity once more ruled at Charkhlik, and Roze Beg was now engaged in laying an ambush for more "gamblers" expected to come from Charchan, in ignorance of the turn their affairs had taken. In this loyal task he duly succeeded within a day of my passage.

On January 8 I arrived at Charkhlik. It was from this modest little oasis, the only settlement of any importance in the Lop region, representing Marco Polo's 'City of Lōp,' that I had to raise the whole of the supplies, labour, and extra camels needed by the several parties for the explorations I had carefully planned during the next three months in the desert between Lop-nor and Tun-huang. I knew well the difficulties which would attend this task even under ordinary conditions. But now I found them greatly increased by the preceding local upheaval and all its consequences. The irruption of the "revolutionaries" and its subsequent repression by the Tungan troops, who had "by mistake" killed even the few Chinese subordinates of the legitimate Amban, had left no Chinese civil authority whatever, and in its absence no effective help could be hoped for from the easy-going Lopliks and their indolent Begs. The trouble about adequate supplies and transport became all the more serious as the passage of relatively large bodies of Tungan troops sent to operate against the numerous "revolutionary" elements which were known to lurk among the Chinese garrisons of Keriya and Khotan, threatened completely to exhaust the slender resources of Charkhlik.

The six days' stay I was obliged to make at Charkhlik in order to secure at least a portion of my requirements through the help of a few old Lop friends, was thus an anxious time for me. I greatly chafed at the

delay, little realizing at the time what a boon in disguise the revolutionary disturbance had been for me. Fortunately I was able to use my stay also for some profitable archæological labour. While executions of captured rebels, requisitions for the troops marching on towards Keriya, etc., kept the little oasis in unwonted animation, I managed to search two small sites near by on the river but beyond the southern edge of cultivation, which previously had escaped me. From ruined Buddhist shrines there I recovered remains of Sanskrit manuscripts on birch-bark, palm-leaf, and silk, fragmentary but of special interest as suggesting import from India by the direct route which still leads from Charkhlik across the Tibetan plateaus to the south.

On the last day of my stay I had the great satisfaction of seeing R. B. Lal Singh safely rejoin me after fully four months of separation. After leaving me in September in the mountains of the Muztagh-ata range he had pushed on and started triangulation of the main K'un-lun range from near Kapa by the middle of October. The work carried on at great elevations and on ground devoid of all resources implied very considerable hardships. But my indefatigable old travel companion faced them with his often proved zeal and succeeded in extending his system of triangles, based on Ram Singh's work of 1906, eastward for over five degrees of longitude before excessive cold and heavy snowfall obliged him to stop it in the mountains. Thus a net with numerous carefully fixed stations and exactly observed angles to many high peaks had been carried well beyond the actual Lop-nor marshes and linked up at the other end with the Indian Trigonometrical Survey. Not satisfied with this achievement, Lal Singh had then continued survey work with the plane-table towards Tun-huang, taking special care to obtain many height observations by mercurial barometer, etc., along his route through those inhospitable snow-covered mountains. After reaching Nan-hu he had struck through the desert north and returned by the track leading along the southern shore of the ancient dried-up salt sea of Lop. The difficulties of this track, the only one through the Lop desert which now, as in Marco Polo's time, is practicable for caravans, were illustrated by the fact that Lal Singh's party found no ice yet formed at the most brackish of the springs along it, and consequently suffered much from the want of drinkable water.

By 15 January 1914 I left Charkhlik for Miran, two marches off to the east, where in 1907 I had made important discoveries among ruins which mark the site of the earliest capital of the "Kingdom of Shan-shan or Lou-lan," corresponding to the present Lop region. Apart from abundant records found in a fort of the Tibetan period I had brought to light in two ruined Buddhist shrines of far earlier date wall paintings of great artistic interest, strikingly reflecting the influence of the Græco-Buddhist art of Gandhara and some almost Hellenistic in character. Owing to the shortness of the time then available for a task presenting exceptional technical difficulties, we had in 1907 been able to remove the frescoes from only one of these temples,

that remarkable series forming the "angel dado" which was exhibited in 1914 in the new galleries of the British Museum together with other selections from my former collection. Of the paintings adorning the walls of the other shrine only specimens could then be safely taken away, and the subsequent attempt made to save the rest was frustrated by the tragic fate which struck my old assistant Naik Ram Singh with blindness at this very place.

I had special reason to regret this when on my renewed visit I found that a portion of the fresco frieze, representing an interesting Buddhist legend, had been broken out by a later visitor in a clumsy fashion which must have caused serious injury if not loss. But the very interesting frescoed dado with its cycle of youthful figures, representing the varied joys of life, set between graceful garland-carrying putti, had fortunately escaped under the cover of sand with which the interior had been filled in as a precautionary measure, and this we now were able to remove intact with all needful care. It proved a delicate task, which greatly taxed the trained skill of Naik Shams Din, my "handy man," and under the icy blasts to which we were almost continually exposed the work was particularly trying. I used the fortnight's stay necessitated by these labours also for a careful search of the adjoining desert belt north, where hidden away amidst tamarisk-covered sand-cones we discovered shattered ruins of two more Buddhist temples of somewhat later date, and secured from them stucco sculptures and other relics of interest.

Simultaneously I had to push on preparations for the explorations which were to take our several parties into the waterless desert north and north-east of the extant Lop-nor. It was some help that the small colony of Lopliks, formerly living at Abdal, whom a slow impulse is gradually turning from semi-nomadic fishermen and hunters into somewhat casual agriculturists, had since 1908 transferred their homesteads to the patches of land now again irrigated from the stream of Miran. But apart from their exceedingly scanty resources and the struggle with their evasive cunning, I had another source of worry to face during those anxious days. Within a week of my arrival at Miran I received a letter from Sir George Macartney bringing serious news. From the headquarters of the provincial Government at Urumchi an edict had issued ordering the district authorities to prevent all surveying work on our part, and in case of any attempt to continue our explorations to arrest and send us under escort to Kashgar "for punishment under treaty." There is neither room nor need here to discuss the probable motives of this intended obstruction, or the alleged regulations by the General Staff of the Chinese Republic quoted in explanation. I knew that the intercession of our Minister at Peking had been immediately invoked from Kashgar by my ever-watchful friend and protector. But that help could make itself felt only after months. In the meantime I should have to contend, if not with an attempt at forcible interference, yet with Chinese passive obstruction easy enough to

apply in my circumstances and particularly dangerous to my plans. Soon there arrived a copy of the edict from the officious Amban at Kara-shahr, whom I had previously asked for a Mongol interpreter. I could gauge the force of the import and language when I saw the fallow face of my poor shrivelled Chinese secretary turning a livid grey as he read through the document and explained it.

Evening after evening as I came back from the day's work at the ruins I looked anxiously among my indolent Lopliks for the first signs of the feared passive resistance to my plans which would have so well suited their natural bent. But fortunately the expected prohibition from Charkhlik never came. As I found out later, I owed this lucky escape to the opportune "revolutionary" outbreak. It had disposed of the original district magistrate before he could take any action. His rebel successor, who had taken charge of the Yamén and found the orders there, had more urgent and profitable business to attend to before he was killed himself. Subsequently the military commandants, in strict observance of Chinese official convention, had carefully abstained from looking into civil affairs, and kept the Yamén papers sealed up until the new Amban had arrived from Urumchi and taken charge of the seal of office. But what a relief it was when I had safely collected all I needed and could set out for the waterless desert where I should know myself completely protected from any risk of human interference! Great as were the difficulties and risks from lifeless nature to be faced there, I was buoyed up by the assurance of freedom for the timely execution of my plans.

On January 23 I had started Lal Singh northward by the Tarim to Tikenlik, where he was to pick up the seven strong camels I had asked Abdur Rahim, the hardy hunter from Singer and our old guide in the Kuruk-tagh, to provide. Thence he was to carry out an exact survey of the ancient river-bed and its branches by which the waters of Konchedarya once reached the area, now wholly desiccated desert, south of the Kuruk-tagh foothills, where Hedin in 1900 had first discovered the ruins of the "Lou-lan" site. The latter was to be our rendezvous. Surveyor Muhammad Yakub Khan, some days later, was sent off with five camels by the desert track to Tun-huang in order to carry a series of exact levelling operations from the eastern end of the great salt-encrusted basin which marks the ancient dried-up Lop sea, towards the termination of the Su-lo Ho drainage.

My own tasks included the excavation of any ruins which the intended exploration of the dried-up delta of the "Kuruk-darya" and the search for the ancient Chinese route once leading eastwards from Lou-lan might reveal. In order to assure adequate time for the latter rather hazardous task and for the survey of the unexplored north and east portions of the great salt-encrusted sea-bed, which, there was reason to assume, that ancient route must have passed through or skirted, it was essential to effect excavations rapidly, and therefore to take along as many

labourers as I could possibly manage to keep supplied with water, *recte* ice. What with big loads of ice sufficient to assure minimum allowances of water for thirty-five people for at least one month, with food supplies of one month for all and of an additional month for my own people, and what with the indispensable outfit of furs, felts, etc., to afford protection in the wintry desert exposed to icy gales, the thirty camels I had succeeded in raising, including our own, were by no means too many. It goes without saying that everybody had to walk, and that the labourers had to help by the carriage of light loads.

It was a great relief when, on February 1, I had safely started this large column for the desert north-eastward. Next day we took up our water-supply in the shape of big blocks of ice packed in bags from a terminal lagoon of the Tarim. Thence four marches brought us to my immediate goal, a large ruined fort (Fig. 12) which had first been sighted by Tokhta Akhun, my faithful old Loplik follower, apparently in 1910, when he returned from the Lou-lan site after guiding there Mr. Tachibana, the young Japanese explorer. By clearing the substantial dwellings within we recovered plentiful relics in the shape of architectural wood-carvings, implements, coins, etc.; these proved occupation to have ceased here about the same period, early in the fourth century A.D., as at the Lou-lan site. Wind-erosion had deeply scoured the ground outside, but had not succeeded in more than breaching in places the very solid enclosing rampart built of alternate layers of brushwood fascines and stamped clay, after the fashion of the ancient Chinese *Limes*. A well-marked dry river-course near the fort was easily traced by the rows of fallen dead trees once lining the banks, and the direction clearly proved it to have been a southern branch of the ancient Kuruk-darya ("the dry river"), which once had carried water to the Lou-lan site.

By following up this river-course we came upon a second and smaller fort, and a reconnaissance north of it soon led to the discovery of the scattered remains of an extensive settlement. The dwellings, built of timber and wattle after the fashion of those at the Niya site, had suffered greatly through the erosive action of wind-driven sand. Yet, where consolidated refuse heaps had helped to protect the original floors, we found ancient records on wood and paper in Kharoshthi and another Indian script, as well as in Chinese and Early Sogdian, besides very interesting and well-preserved remains of furniture, personal equipment, fabrics, and the like. There could be no doubt that this settlement, too, had been occupied down to the beginning of the fourth century A.D., and by people sharing the same well-developed civilization due to the mixture of Indian, Chinese, and Western influences which my finds of 1906 at the Lou-lan site had illustrated.

The exact antiquarian evidence here obtained has its special value, because it enables us to date a variety of physical features which I could observe in the immediate vicinity of the ruined settlement. They throw

fresh light on the hydrography and early occupation of this part of the Lop-nor region during historical times and those immediately preceding them. For the latter the abundant finds of stone implements, such as Neolithic arrow-heads and jade celts, which were picked up from the eroded surface of the ground near these ruins afforded a very useful guide. The fact that these finds of stone implements continued over most of the wind-eroded ground up to the Lou-lan site had a significant bearing on the so-called "Lop-nor problem," the discussion of which has long been carried on without an adequate basis of surveys.

It was similarly important that on the two long marches which brought us there we met a succession of ancient river-beds all lined by rows of dead Toghrak (wild poplar) trees, and clearly recognizable by their direction as having branched off from the "Dry River" skirting the foot of the Kuruk-tagh (Fig. 11). It was plainly a considerable delta, not a large terminal lake, which had existed here during the historical times accessible to antiquarian evidence, and our new surveys have shown how far it extended south and south-west. Finds of Chinese Han coins and of small metal and pottery fragments of undoubtedly the same historical period mingled freely with those of the Stone Age, just on the ground where (according to a recent theory) we ought to have been crossing the position assumed for the Lop-nor of the epoch when Lou-lan was occupied.

It was long after nightfall on February 10 that we struggled through to the old Chinese station marked by the chief ruins of the Lou-lan site. It was very trying ground we had to cross all day, cut up by wind erosion into an unending succession of narrow and steep clay terraces all running east-north-east to west-south-west, the direction of the prevailing wind, and very difficult for the camels to pass. From our base camp at the foot of the familiar Stupa ruin I pushed out reconnaissances into the unknown desert to the east and north-east, while keeping my diggers at work on deeper deposits of refuse, etc., which had escaped attention during the stress of our previous visit. Among the numerous finds of ancient documents on wood and paper which rewarded this clearing, I may specially mention one, unfortunately fragmentary, which shows a script as yet unrepresented among all our former collections. The rest were in Chinese, Kharoshthi, and the Iranian language known since my finds of 1906-07 as Early Sogdian.

Quite as interesting to me were the series of close observations I was able to make on ground immediately adjoining the ruins, as to the levels at which the process of denudation and wind-erosion had been arrested from time to time by a temporary return of moisture and desert vegetation affording protection to the soil. These clearly showed that the process, striking as its effects everywhere are, had been neither constant nor uniform during the sixteen hundred years which have passed since the abandonment of the station. Hence a mere line of levelling carried across areas which wind-erosion has affected in such

different ways, could not, in the absence of dateable marks in the shape of structural or other remains, be expected to yield reliable outlines of the hydrographic configuration of the ground at earlier periods.

But the chance for more exciting work came when I could follow up what the reconnaissance surveys, carried out particularly by Afrazgul Khan, my young Pathan surveyor, with great zeal and intelligence, had revealed towards the north-east. There on ground wholly untouched by human feet for so many centuries, I had hoped to find ruins near what I conjectured to have been the line of the earliest Chinese route leading into the Tarim Basin from Tun-huang and the extreme west of China proper. A succession of important discoveries soon confirmed that hope. On the top of a large clay terrace or Mesha, rising steeply some 35 feet above the eroded ground-level, I came upon most interesting remains of an ancient burial-ground. On the sides of the mound graves had been partially exposed and destroyed by wind-erosion undercutting the banks and causing them to fall. But the top of the Mesha had been safe from this destructive agent, and there we found a series of large grave pits which yielded a rich antiquarian haul in quite bewildering confusion.

Mixed up with human bones and fragments of coffins there emerged here in abundance household implements of all sorts, objects of personal use such as decorated bronze mirrors, wooden models of arms, Chinese records on paper and wood, and, above all, a wonderful variety of fabrics which delighted my eye. Among them were beautifully coloured silks, pieces of rich brocade and embroidery, fragments of fine pile carpets by the side of coarse fabrics in wool and felts. It soon became evident that these remnants of garments of all sorts had been used for wrapping up bodies, perhaps partially embalmed. I could not have wished for a more representative exhibition of that ancient Chinese silk trade which we know to have been a chief factor in opening up this earliest route for China's direct intercourse with Central Asia and the distant West, and which had passed along here for centuries.

A variety of very interesting problems as to the origin of designs, etc., usually attributed to Persian art of the Sassanian period, had been raised by the fine decorated silk fabrics I had discovered on my former journey in the walled-up cave temple of the "Thousand Buddhas" near Tun-huang. Here a mass of far older and dateable materials was coming to light to help to solve those problems. I soon realized from various indications that the contents of these pits must have been collected, before the final abandonment of the Chinese military station of Lou-lan, from older graves which wind-erosion or some similar cause had exposed or was threatening. Consequently the relics here saved, in obedience to a pious custom still prevalent among the Chinese, could safely be assigned to that period of the rule of the Han dynasty which followed the first expansion of Chinese trade and power into Central Asia about the close of the second century B.C. There was no time then to examine the wealth of beautiful

designs and colours making a feast for my eyes. But I felt that in this utter desolation of the wind-eroded clay desert, where nature was wholly dead and even the very soil was being reduced, as it were, to the condition of a skeleton, there had opened up a new and fascinating chapter in the history of textile art. It will take years to read it in full clearness.

My satisfaction was equally great when, after a long and fatiguing tramp from our base, I found myself by nightfall at a large walled enclosure near to where one of the dry river-beds passing the Lou-lan site seemed to merge in the hard salt expanse of an ancient terminal marsh. We had struck the fortified *castrum* which, as close examination soon showed, had served as a *point d'appui* for Chinese missions and troops where they first reached Lou-lan territory after having crossed the salt-encrusted dry lake-bed and skirted its absolutely barren north shores. Its walls, built with regular alternate layers of clay and carefully secured reed fascines, and remarkably well preserved after two thousand years' exposure, showed constructive features in closest agreement with those observed in the westernmost extension of the ancient Chinese border wall which I had discovered and explored in 1907 in the desert of Tun-huang.

There could be no doubt that the fort dated, like the Tun-huang *Limes* itself, from the first military advance of the Chinese into the Tarim Basin, about 104 B.C., and that it represented, as it were, the bridge-head of the desert route by which that advance was made possible. I had become so familiar with that ancient *Limes* and the technical skill displayed in its construction that I could not help rejoicing at the way in which this work from the hands of the same old Chinese engineers had withstood the attacks of that most formidable enemy in this region, wind-erosion. The walls of reed fascines had nowhere been seriously breached, while inside the circumvallation the force of the wind has worked terrible havoc, scouring out big hollows down to 20 feet and more below the ground-level and reducing a large central structure to a bare clay terrace strewn with scattered debris of timber. Under the shelter of the north wall, however, refuse heaps had survived, and these yielded Chinese records on wood and paper.

Beyond this fortified Chinese station other remains were traced. Of these it must suffice to mention a small ruined fort which occupied a commanding position on the narrow top of a precipitous clay ridge fully 100 feet high (Fig. 14). It had evidently served as a stronghold and look-out post for some chief of the indigenous population of Lou-lan. Of the type, habits, and civilization of the Lou-lan people as the Chinese found them on the first opening of the route through the desert, the Han Annals have preserved some curious notes. The accuracy of these was illustrated in a most striking fashion by the examination of the graves covering the other end of the clay ridge. Here we found the bodies of men and women, probably members of the old chief's family, in a truly wonderful state of preservation, due, no doubt, to the absolute dryness of the climate and the safe elevation

of their resting-places. The peaked felt caps of the men decorated with big feathers and other trophies of the chase, the arrow-shafts by their side, the simple but strong woollen garments fastened with pins of hard wood, the neatly woven small baskets holding the food for the dead, etc., all indicated a race of semi-nomadic hunters and herdsmen, just as the Chinese describe them.

It was a strange sensation to look down on figures which but for the parched skin seemed like those of men asleep, and to feel brought face to face with people who inhabited, and no doubt liked, this dreary Lop-nor region in the first centuries A.D. The features of the heads closely recalled the *Homo alpinus* type, which, judging from my anthropometric records, worked up by Mr. T. A. Joyce, still supplies the prevalent element in the racial constitution of the indigenous population of Chinese Turkestan and is seen in its purest form in the Iranian-speaking tribes near the Pamirs. The general appearance of these Lou-lan people seemed curiously to accord with the significant juxtaposition in which small bronze objects of Chinese origin were picked up on the slope below the little fort together with stone implements. There were indications elsewhere, too, suggesting that the interval separating the latest Neolithic period in Lou-lan from the advent of the Chinese may not have been a very long one.

Apart from their direct interest, the discoveries here briefly indicated had a special importance by furnishing me with a safe starting-point and some guidance for the difficult task still before us, that of tracing the line of that famous ancient route through the forbidding desert eastwards. But it was impossible to set out for it at once. Incessant toil in the waterless desert with constant exposure to its icy winds had exhausted our Loplik labourers, hardy plants as they were and pleased with the rewards I gave them. When the last digging at the outlying ruins to the north-east had been done, I had to take them back to our Lou-lan base camp, whence they could return in safety under Ibrahim Beg's guidance to the world of the living.

The season's initial sand-storm, which had broken with full fury on the preceding night and which the Lopliks attributed to the wrath of the dead we had disturbed, made this march exceptionally trying, apart from the risks of straying which the semi-darkness involved for the men. To my great relief I found Lal Singh safely arrived after accomplishing his survey tasks in the west on a circuit of some 400 miles. He had been duly joined by that plucky hunter, Abdur Rahim, who with his life-long desert experience and his magnificent camels brought fresh strength for our column. It may serve to illustrate the stamina of his animals, bred and reared in the Kuruk-tagh, that the baby camel to which one of them gave birth at the Lou-lan site subsequently traversed with us all those waterless wastes of salt and gravel unharmed and almost throughout on its own legs.

Together we then moved north to the Kuruk-tagh in order to secure

for our hard-trying camels a few days' rest with water and grazing at the salt springs of Altmish-bulak. The new route followed on the three days' march allowed me to examine more burial-grounds on the gravel glacis which overlooks the ancient riverine belt, now dried up and eroded by the wind. Their remains proved very helpful for explaining my previous finds east of the Lou-lan site. But even more welcome was the four days' halt at Altmish-bulak. Its springs, saline as they are, gave our brave camels their first chance of a real drink after three weeks, and on the reed beds around them they could gather fresh strength for the hard task still before them. After the dead world we had toiled in, this little patch of vegetation seemed delightful, too, to us humans.

After replenishing our ice supply and taking a carefully arranged store of fuel, we started on February 24 for our respective tasks. The one allotted to Lal Singh was to survey the unknown north-east shores of the great salt-encrusted basin, which represents the fullest extension of the dried-up ancient Lop-nor, and the barren hill ranges of the Kuruk-tagh overlooking them. I myself, accompanied by Afrazgul and Shams Din, proposed to search for the ancient Chinese route where it left the edge of the once inhabited Lou-lan area, and to trace it over whatever ground it might have crossed, right through to where it was likely to have diverged from the line still followed by the desert track, which leads from Tun-huang along the southern shore of the great dried-up Lop sea towards Miran. It was a fascinating task after my own taste, combining geographical and historical interest, but one attended also by serious difficulties and risks.

From what I knew of the general character of the ground before us, it was certain that we could not hope for water, nor over most of it for fuel to melt our ice with, before striking the Tun-huang caravan track, a matter of some ten days' hard marching judging from the approximately calculated distance. There was a limit to the endurance of our brave camels, and with the heavy loads of ice, fuel, and provisions which had to be carried for the sake of safety, I could not expect the animals, already hard tried by the preceding weeks' work in absolute desert, to remain fit for more than ten to twelve days. It was impossible to foresee what physical obstacles might be met and might delay us beyond the calculated measure of time in this wilderness devoid of all resources and now more barren, perhaps, than any similarly large area of this globe. There remained the problem how to hit the line of the ancient route and to track it through on ground which long before the dawn of historical times had ceased to offer any chance for human occupation. For a careful search of any relics left behind by the ancient traffic, which had passed through what the Chinese Annals vaguely describe as the terrible "desert of the White Dragon Mounds," there would be no time. Much, if not most, had to be left to good fortune—and, combined with what hints I could deduce from previous archaeological and topographical observations, Fortune served me better than I had ventured to hope.

Physical difficulties soon presented themselves as we made our way south through and across a perfect maze of steep clay terraces all eroded by the same east-north-east wind which had sculptured the usual 'Yardangs' of Lou-lan, but of far greater height. Having thus regained the vicinity of the terminal *point d'appui* above mentioned of the ancient route, I soon found confirmation for my previously formed conjecture that the initial bearing of the route lay to the north-east. It was marked by the almost completely eroded remains of an outlying indigenous camping-place and of an ancient watch-tower of the type familiar to me from the Tun-huang *Limes*, which I opportunely discovered on towering terraces at the very edge of ancient vegetation. We had reached here the extreme eastern limit of the area to which the waters of the Kuruk-darya had once carried life. Beyond there were no ruins to guide us. The desert eastwards was even in ancient times as devoid of plant or animal life of any sort as it now is. As we left behind the withered and bleached fragments of the last dead tamarisk trunk lying on the salt soil, I felt that we had passed from the land of the dead into ground that never knew life—except on the route to be tracked.

As we steered onwards by the compass across absolutely barren wastes of clayey *shôr*, detritus or hard salt crust, chance helped us in a way which at times seemed almost uncanny. Again and again finds of early Chinese copper coins, small metal objects, stone ornaments and the like gave assurance that we were still near the ancient track by which Chinese political missions, troops and traders, had toiled for four centuries through this lifeless wilderness. It is impossible to record here exact details of all such finds. But I may at least briefly mention two thrilling incidents which by their nature helped greatly to raise the spirits of my men and filled them with superstitious confidence in some spirits' safe guidance. At the time they made me too feel as if I were living through in reality experiences dimly remembered from some of Jules Verne's fascinating stories I had read as a small boy.

Thus, on the third day of our march, when the last traces of ancient desert vegetation had long remained behind, we suddenly found the ancient track plainly marked for about 30 yards by over two hundred Chinese copper coins strewing the dismal ground of salt-encrusted clay. They lay in a well-defined line running north-east to south-west, just as if some kindly spirit among those patient old Chinese wayfarers, who had faced this awful route with its hardships and perils, had wished to assure us that the bearing I was steering by was the right one. In reality they must have got loose from the string which tied them and gradually dropped out unobserved through an opening in their bag or case. The coins were all of the Han type, and seemed as if fresh from some mint. Some 50 yards further on in the same direction we came upon a similar scattered heap of bronze arrow-heads, all manifestly unused and looking as if newly issued from some arsenal of Han times. Their shape and weight

exactly agreed with the ancient Han ammunition I had picked up so often along the *Limes* of Tun-huang, which was garrisoned during the first century before and after Christ. The way in which the coins and arrow-heads had been allowed to remain on the ground suggested that they had dropped from some convoy of stores in Han times which was moving at night-time, and probably a little off the main track but still in the right direction.

Next day's long march brought another discovery equally stirring and useful. We had followed our north-easterly course across easy ground of bare clay and mica detritus when it approached at a slant a forbidding belt of salt-coated erosion terraces, clearly of the type to which the Chinese of Han times had applied the graphic designation of "White Dragon Mounds." I knew it foreboded the close vicinity of that ancient sea-bed encrusted with hard crumpled salt which I was anxious to steer clear of as long as possible, on account of the terrible surface it would present for our poor camels' feet. They were sore already, and the painful process of "re-soling" (by pieces of ox-hide sewn on to the live skin) had to be resorted to night after night. I was just preparing to climb the prominent Mesha which had served as our guiding point, and to use it as a look-out, when we found on its slopes Chinese coins, soon followed by quite a collection of metal objects, including bronze ornaments and a well-preserved dagger and bridle in iron. Evidently the terrace had served as a regular halting-place, and a careful inspection of the ground ahead suggested that it had been used for this purpose, because at its foot was the first piece of ground level and tolerably clear of salt which travellers would strike after passing through the forbidding maze of "White Dragon Mounds" and the dried-up sea-bottom beyond.

I had to decide whether I was to strike across the latter now or to skirt the ancient seashore by continuing the north-east course, which threatened to take us further and further away from where we hoped to find water. It might have meant a *détour* of days, and the interpretation I put on our lucky find encouraged me to avoid this by heading straight for the dead salt sea. That evening we had reached its shore-line, and the crossing effected next day proved how wise the change of direction had been. The march across the petrified sea, with its hard salt crust crumpled up into knife-like small pressure ridges, was a most trying experience for camels and us men alike. But when this weary tramp of 20 miles, more fatiguing than any I ever had in the desert, had safely brought us to the first spot of soft salt in front of the opposite line of salt-covered erosion terraces, and we could halt for a night's rest, I had good reason to feel glad for my choice and grateful for the find which had prompted it. As the following marches proved, we had crossed the forbidding sea of hard crumpled salt at the very point where it was narrowest, and had thus escaped a night's halt on ground where neither beast nor man could have found a spot to rest in comfort. It was, no doubt, this

FIG. 13.—CLAY TERRACES MARKING SHORE-LINE TOWARDS EASTERN END OF ANCIENT LOP SEA-BED.

FIG. 14.—WIND-ERODED CLAY RIDGE NORTH-EAST OF LOU-LAN SITE, BEARING REMAINS OF ANCIENT FORT.

FIG. 15.—ANCIENT SALT-ENCRUSTED LAKE-BED NORTH OF KUM-KUDUK.
Patch of actual salt bog shows up white.

FIG. 16.—RUINED WATCH-STATION ON ANCIENT CHINESE FRONTIER WALL, WEST OF TUN-HUANG.

The projecting horizontal lines in wall on right mark layers of reed fascines.

advantage which had determined those old Chinese pioneers in the choice of this line for their route.

Helped by finds of coins and the like, we continued to track the route over ground still absolutely barren, until we reached, three days later, the last offshoot of the low desert range which overlooks from the north the extreme eastern extension of the ancient dried-up sea-bed. Then, as we skirted its shore-line under steep cliffs looking exactly like those of a sea still in being (Fig. 13), I had the satisfaction of finding the ancient track in places still plainly marked in the salt-encrusted ground. It was a strange sensation when my eyes first caught the straight line of the ancient road, where it cuts for nearly two miles across a small bay of the petrified sea. It showed a uniform width of some 20 feet, and was worn down to a depth of about one foot in the surface of hard salt cakes, as a result of the passage for centuries of transport animals, and probably carts too. There was ocular evidence here of the magnitude of the traffic which had once moved through these barren solitudes. But how those patient old Chinese organizers of transport had maintained it over some 150 miles of ground without water, fuel, or grazing still remains somewhat of a problem.

It was a great relief when by the ninth day from Altmish-bulak we came upon the first scanty scrub and reeds growing on sandy soil by the shore of the ancient dried-up sea. Next day a long march to the south-east brought us safely across the wide, salt-encrusted expanse, here showing patches of actual salt bog (Fig. 15), to the lonely caravan track towards Tun-huang. There at the well of Kum-kuduk I had the great satisfaction of finding brave Lal Singh just arrived after carrying out an interesting survey of the north-eastern shores of the dried-up sea-bed and of the straggling low ranges which abut upon them. One day later our successfully arranged concentration was completed by the arrival of our heavy baggage from Miran.

Letting it move on towards Tun-huang by the caravan track we turned once more north across the end of the dried-up Lop sea, and continued to explore the ground close to the foot of the Kuruk-tagh where the ancient route had passed. Further to the north-east the desert area near the present terminal basin of the Su-lo Ho River, with its dried-up depressions and mazes of lacustrine Meshas, offered opportunities for geographically interesting new surveys. There I picked up Surveyor Muhammad Yakub Khan, who had carried a carefully observed line of levels all the way up from the southern shore of the ancient dry sea. Coupled with other observations, its result has confirmed my belief that the waters of the Su-lo Ho at a period relatively recent in a geological sense had drained into the Lop-nor Basin. We found them still percolating in the same direction the sandy soil at the foot of the Kuruk-tagh, within a few feet from the surface. Evidence that this drainage had been more considerable during historical times was furnished by the remains we traced of a canal, which appears to have been constructed for

the purpose of carrying water along a portion of the ancient Chinese route where it approached the eastern end of the dried-up salt sea.

Leaving the surveyors behind for supplementary tasks, I reached by March 16 the westernmost point of that fortified ancient Chinese border line which I had first discovered and successfully explored in 1907. It was a cheering experience for me during the next few days to revisit the ruined watch-stations of the "Great Wall" in this desolate gravel waste, and clear up on the spot antiquarian questions raised by the ancient records they had yielded. I felt quite at home here as I followed again the tracks still clearly visible for long distances which the tramp of the patrols marching along the wall for centuries had worn into the soil. The fact that in places I could quite distinctly recognize my own footprints of seven years before, and those of my little dog, was the best illustration how long this bare gravel surface might retain traces of regular tracks even if trodden about the time of Christ. From Lake Khara-nor onwards I then completed my detailed exploration of the Tun-huang *Limes* by searching all the ruined watch-towers along a portion of the line where circumstances had in 1907 obliged me to leave a gap in my survey (Fig. 16). These small watch-stations usually occupied the top of high erosion terraces, and their ruins and refuse heaps were thus well protected from damp. So our search was rewarded by plentiful finds of Chinese records on wood, curious articles of equipment and other interesting relics going back to Han times.

Before the close of March 1914 I had regained my old haunts of Tun-huang, and after a very brief halt to allow men and animals to recover from our trying winter campaign I started for the explorations planned eastwards. They were to take me mainly into the deserts which fringe on the south and east the great barren hill region usually designated as the Pei-shan Gobi. The distances were great and short the remaining season during which that waterless ground could be visited before the great summer heat set in. But even thus I could not forego a renewed visit to the famous cave temples of the "Thousand Buddhas" south-east of Tun-huang. There in 1907 I had been fortunate enough to secure such abundant antiquarian and artistic spoil from the walled-up temple cella, in which a whole library of Buddhist and other manuscripts and hundreds of fine paintings on silk had been hidden away early in the eleventh century together with a multitude of other relics.

I could not expect to make such a haul now. For when a year after my own visit, Professor Pelliot, on a mission from the French Government, had, with his expert knowledge of Chinese, searched the hoard and carried off a considerable selection of its remaining manuscripts, the attention of the authorities at Peking had been attracted to the old library, and its transfer to the capital was decreed. Of the careless and in reality destructive way in which the order had been carried out I found evidence in the many scattered rolls of Chinese Buddhist texts undoubtedly derived from

this source which were offered to me for purchase at a number of towns both in Turkestan and Kansu. So it was satisfactory to find that somehow a considerable quantity of Chinese manuscripts from the walled-up cella still remained behind at the "Thousand Buddhas," and that my old priestly friend, Wang Tao-shih, was prepared to part with them in regard for a proper compensation for his pious establishment. He showed me with genuine pride the good use to which he had put the sum previously received from me, by building some gaudy new shrines and comfortable pilgrims' quarters. It was also reassuring to see that his personal relations with the pious people of Tun-huang and their official guardians had evidently in no way suffered by our former little transaction. The only regret which it had left behind in the quaint little monk was that he had not been shrewd enough to accept the offer made by me in 1907 for the whole hoard, and had thus failed to save it from dispersion and to secure its full value for his shrine. Our reunion was throughout very cordial, and when we parted again my collection had received an appreciable addition of cases with old manuscripts and other relics in evidence of Wang Tao-shih's good will, and his appreciation of my ever-faithful attachment to the memory of holy Hsüan-tsang.

My immediate task, and one cherished ever since 1907, was to trace the line of the ancient Chinese *Limes* as far as possible to eastward, and to explore whatever ruins might have survived along it. After striking across a difficult belt of salt marshes, which nearly embogged my camels, I came again upon the ancient border wall halfway between Tun-huang and An-hsi. From there we succeeded in exploring its line for close on 250 miles eastwards. For almost the whole of this distance the wall, with its watch-towers and small military posts, had been built across what already in ancient times was absolute desert ground. The resulting immunity from human interference had contributed greatly to the preservation of the remains for fully two thousand years; but the remarkable method of construction employed was an even more important factor. The most destructive of natural forces in this region has always been slow-grinding but relentless wind-erosion. The wall or *agger*, built of carefully secured fascines of reeds, brushwood, or tamarisk branches, whichever of these materials were available in the immediate vicinity, was specially adapted to withstand it. Even where the watch-towers, once massively built in sun-dried bricks or stamped clay, had been under-cut by erosion at the base and been subsequently reduced to shapeless low mounds, difficult to recognize from a distance, the direction of the wall still clearly revealed itself, as it stretched away in a characteristic straight line across wastes of gravel or drift-sand.

The remains proved to have suffered most along that stretch of ground where the *Limes*, after crossing the Su-lo Ho to its right bank east of An-hsi, ran close to the deep-cut river-bed, and in a due easterly direction. On the bare riverine loess crossed here by the wall the erosive force of the

prevailing north-east winds, blowing down with great violence from the gravel plateaus of the Pei-shan, could fully assert itself. But even where all structural features had been completely effaced it was easy for us with the experience gained elsewhere accurately to determine the position of the posts once guarding the border, from the fragments of pottery, coins, metal objects, and other hard *débris* which could be picked up at these points from the wind-worn surface. It was quite an exciting chase to search for these indications, and my Indian assistants and Turki followers had by now become expert in the game.

Where the Su-lo Ho valley bends sharply southward the line of the *Limes* was found to turn to the north-east, and to approach closer and closer to the foot of the Pei-shan. The ground crossed by it had remained so far unsurveyed, and the difficulties of our search were much increased by the distances which separated the long-forgotten border from the nearest water. Fortunately the days had now grown longer, and I was able to take out my little detachment of diggers mounted on the hardy big donkeys which abound at the oases of this region. Ample finds of ancient Chinese records on wood, articles of furniture, fragments of arms and implements rewarded the rapid search of the ruined watch-stations. That all these had been left behind by the Chinese troops, who during the first century before and after Christ had guarded this most dismal of frontiers, was made clear on the spot by conclusive archaeological evidence. The finds of records still await expert examination by M. Chavannes, my learned Sinologue collaborator at Paris. They may be expected to furnish an important addition to the collection of early Chinese records resulting from my former explorations, which he had published in 1913.

Interesting light was thrown on the climatic conditions prevailing here from early times by the fact that here too the inscribed slips of wood, the "waste papers," to use an anachronism, thrown out of ancient offices, were found often in refuse layers covered by a few inches only of gravel or *débris*. Their preservation in such conditions presupposes a remarkable dryness of the climate for the last two thousand years. Apart from this and the uniform barrenness, there was considerable variety in the natural features of the ground traversed by this eastern portion of the *Limes*. Thus all the more opportunity presented itself of observing the remarkable skill and topographical sense with which those old Chinese engineers of Han times had adapted their defensive border-line to different local conditions.

That they were prepared for great and sustained efforts demanding real powers of organization in the face of formidable natural obstacles was clearly demonstrated when, some 30 miles to the north-east of the little oasis of Ying-p'an ("the garrison") we found the *Limes* boldly carried into and through what since ancient times must have been a big area of drift-sand. Where not completely buried by high dunes, the wall built with tamarisk fascines, and of the usual thickness of 8 to 9 feet, still rose

to close on 15 feet. Special difficulties must have been encountered in assuring water and supplies for the men guarding this section. In order to safeguard what evidently was an important line of communication and supplies leading to it, a chain of small fortified stations had been constructed to the south independently of the wall, but at the same period. It ran in the direction of the big oasis of Su-chou, an important Chinese base ever since Han times, and to this I turned when early in May it became necessary to make preparations for our next move northward.

I had planned to follow the united course of the rivers of Su-chou and Kan-chou down into southernmost Mongolia, and to explore the ruins which the reports of Russian travellers had led me to expect along it and in its terminal delta. I was specially attracted to this ground by its geographical character, which suggested close resemblance to that of the Lop-nor region, and by the interest attaching to its earliest historical past. For we know that this region of the Etsin-gol, as the river is called by the Mongols, had been included in the wide dominion held by those earliest nomadic masters of Kansu, the "Great Yüeh-chih," the later Indo-Scythians, and the Huns, whose successive migrations westwards were destined to affect so deeply the history of Central Asia as well as of India and the West.

The effective intercession of H.M.'s Minister at Peking had secured for me a very friendly reception by the Chinese administration of the Kansu Province. The Tao-tai of Su-chou agreed to provide me with a recommendation to the chief of the Torgut Mongols who now graze in the Etsin-gol delta, and on May 10 I was able to set out northward. The track I followed down the river of Su-chou allowed me to approach once more the area where we had previously lost the line of the ancient frontier amidst high dunes. Pushing a reconnaissance into the stony desert north-west of the Chint'a oasis, I came upon remains of the *Limes* where it emerged on less impracticable ground near the south-eastern extremity of the Pei-shan. Thence we tracked it right through to the north of the Mao-mei oasis, the last Chinese settlement. There Lal Singh rejoined me after having followed a hitherto unsurveyed route along the river of Kan-chou, where it breaks in a picturesque gorge through the westernmost hill range of the Ala-shan.

In the valley of the Etsin-gol nature, by affording water and grazing, has ever provided an easy route for raids and invasions from the Mongolian steppes into the line of the westernmost Kansu oases, which itself constitutes the great natural highway connecting China with the Tarim Basin and innermost Central Asia. Ruined forts of imposing size and evident antiquity were found to guard the point where this route of invasion cuts through the ancient border-line drawn by the Chinese when they first occupied those oases in the reign of the great Han Emperor Wu-ti. One fort built with clay walls of exceptional strength looked an exact counterpart of the ancient frontier post of the "Jade Gate," famous in Chinese

historical records, and previously identified by me on the Tun-huang *Limes*. We found evidence that the fortified border-line after crossing the Etsin-gol, north of Mao-mei, had continued through the desert eastwards. But when we came back in June from the Etsin-gol delta the summer heat had become too great to permit of further search on this waterless ground.

We found even in May our long marches trying as we moved down by the sandy bed of the Etsin-gol, nearly a mile wide in places, but absolutely dry at that time. Only at rare intervals could water be obtained from wells dug in deep hollows below the banks. Some 90 miles below Mao-mei the river passes through a low rocky spur thrown out from the easternmost Pei-shan, and spreads out in a delta, which extends for over 110 miles to the north, terminating in a line of brackish lakes and marshes. The conditions brought about here by a succession of low-water seasons furnished a striking illustration of the appearance which the ancient Lou-lan delta we had explored in the winter may have presented before its final desiccation. Where river-beds lined by narrow belts of riverine jungle had been left dry for long years, we found many of the wild poplars already dead or dying. The wide stretches of ground separating the several beds showed but scanty scrub, or else were absolutely bare. No wonder that we heard sad complaints in the scattered camps of the two hundred odd Mongol families which are established in the Etsin-gol delta, about the increasing difficulties caused by inadequate grazing. Their chief, whom I visited on May 25 in his modest encampment, proved a well-meaning but weak individual, and his subjects as indolent as they were "much given to deceit," to use an expression of my Chinese patron saint. It was no easy matter to secure an adequate number of labourers for my intended excavations, and still more difficult to keep them at work, in spite of very generous pay.

Advantages of geographical position must at all times have invested this extensive riverine tract, limited as are its resources, with considerable importance for those, whether armed host or traders, who would make the long journey from the heart of Mongolia in the north to the Kansu oases. It had been the same with the ancient Lou-lan delta, without which the Chinese could not have opened up the earliest and most direct route for the expansion of their trade and political influence into Central Asia. The analogy thus presented could not fail to impress me even further when I proceeded to examine the ruins of Khara-khoto, the "Black Town" (Fig. 17), which Colonel Kozloff, the distinguished Russian explorer, had been the first European to visit during his expedition of 1908-09. There remained no doubt for me then that it was identical with Marco Polo's "City of Etzina." Of this we are told in the great Venetian traveller's narrative that it lay a twelve day ride from the city of Kan-chou, "towards the north on the verge of the desert; it belongs to the Province of Tangut." All travellers bound for Kara-koram, the old capital of the Mongols, had here to lay in victuals for forty days in order to cross the great "desert

which extends forty days' journey to the north, and on which you meet with no habitation nor baiting place."

The position thus indicated was found to correspond exactly to that of Khara-khoto, and the identification was completely borne out by the antiquarian evidence brought to light. It soon showed me that though the town may have suffered considerably, as local tradition asserts, when Chingiz Khan with his Mongol army first invaded and conquered Kansu from this side about 1226 A.D., yet it continued to be inhabited down to Marco Polo's time, and partially at least for more than a century later. This was probably the case even longer with the agricultural settlement for which it had served as a local centre, and of which we traced extensive remains in the desert to the east and north-east. But the town itself must have seen its most flourishing times under Tangut or Hsi-hsia rule from the beginning of the eleventh century down to the Mongol conquest.

It was from this period, when Tibetan influence from the south seems to have made itself strongly felt throughout Kansu, that most of the Buddhist shrines and memorial Stupas dated, which filled a great portion of the ruined town and were conspicuous also outside it. In one of the latter Colonel Kozloff had made his notable find of Buddhist texts and paintings. But a systematic search of this and other ruins soon showed that the archaeological riches of the site were by no means exhausted. By a careful clearing of the debris which covered the bases of Stupas and the interior of temple cellas we brought to light abundant remains of Buddhist manuscripts and block prints, both in Tibetan and the as yet very imperfectly known old Tangut language, as well as plenty of interesting reliefs in stucco or terra-cotta and frescoes. The very extensive refuse heaps of the town yielded up a large number of miscellaneous records on paper in the Chinese, Tangut, and Uigur scripts, together with many remains of fine glazed pottery, and of household utensils. Finds of Hsi-hsia coins, ornaments in stone and metal, etc., were also abundant, particularly on wind-eroded ground.

There was much to support the belief that the final abandonment of the settlement was brought about by difficulties of irrigation. The dry river-bed which passes Khara-khoto lies some 7 miles to the east of the nearest branch still reached by the summer floods. The old canals we traced, leading to the abandoned farms eastwards, are removed considerably further. It was not possible to determine by conclusive evidence whether this failure of irrigation had been the result of desiccation in the Etsin-gol delta or been caused by some change in the river-course at canal-head, with which the settlement was for some reason unable to cope. But there seemed to me good reason to believe that the water-supply now reaching the delta during a few summer months would no longer suffice to assure adequate irrigation for the once cultivated area. Even at the Mao-mei oasis, over 150 miles higher up the river, and with conditions of ground far more favourable for the maintenance of a system of canals,

serious trouble had been experienced for years past in securing a sufficient discharge early enough in the season, and much of the once cultivated area seemed to have been recently abandoned.

With the rapidly increasing heat, work at the desert sites had become very trying both for the men and our camels, upon which we depended for the transport of water. With the completion of our task at Khara-khoto, and of the surveys which had meanwhile taken Lal Singh to the terminal lake-basins of the Etsin-gol, I was glad to let the hard-worked camels depart for their much-needed summer holiday in the Kongurche hills north-eastward and to start myself with Lal Singh south to the foot of the Nan-shan. The new route, which we were able to follow for part of the journey, took us through hitherto unexplored portions of the desert hills to the east and north of the river of Kan-chou. But owing to the heat and the scarcity of springs it implied serious fatigues, and it was a relief when Kan-chou was safely reached before the close of June.

A short but refreshing halt in that large and pleasant oasis was devoted to the arrangements needed for the new surveys I had planned in the Central Nan-shan. Their object was to extend the mapping which in 1907 we had effected in the high mountains near the sources of the Su-lo Ho and Su-chou River by accurate surveys of the high ranges further east, containing the headwaters of the river of Kan-chou. In conjunction with our labours in the Etsin-gol region, they were intended to complete the mapping of that large north-western portion of Kansu which, inasmuch as it sends all its waters into drainageless basins, may well be claimed in respect of its hydrography and general physical conditions as belonging to Central Asia rather than to China. Knowing the reluctance of the local Chinese to venture far into those mountains, I was prepared for the difficulties experienced at the outset in securing transport. But a fortunate chance brought just then an old Chinese friend to the military command of Kan-chou in the person of worthy General Tsai, whose kindness I remembered so well from my visits to Su-chou in 1907, and his opportune help enabled us to set out for the mountains by the first week of July.

The route followed during the first marches acquainted me with a series of old Buddhist cave temples at Ma-ti-ssü, containing sculptures of Sung times, and with other interesting Buddhist remains in the pretty little town of Nan-kou-ch'êng at the foot of the mountains. The visit did not pass without profit for my collection of antiques, and also helped to make me realize that we were now near a dividing line of distinct geographical interest. For while to the west cultivation, whether in the plain or along the foot of the mountains, requires irrigation, we now came upon loess slopes and big alluvial fans which rainfall alone suffices to make fertile. Our approach to the watershed of the Pacific Ocean was appropriately foreshadowed by this marked change in climatic conditions.

Following the route which leads towards Hsi-ning and ascending through the picturesque gorge and the pass of O-po, we reached the

broad valley where the easternmost feeders of the river of Kan-chou gather at an elevation of over 11,000 feet. Thence we were making our way westwards over high alpine grazing grounds frequented in the summer by Tangut herdsmen and horse-breeders, when I met with a serious riding accident which might well have put an end for ever to all my travelling. My Badakhshi stallion reared suddenly, and over-balancing himself fell backwards upon me, with the result that the muscles of my left thigh were severely injured. For over two weeks I was unable to leave my camp bed or to use the crutches we improvised. But fortunately the arrangements already made allowed me to let Lal Singh proceed for the topographical tasks I had planned. He carried them through with all his wonted devotion and energy, and no time was lost in our programme. Nearly three weeks had passed when, with my leg still feeling the strain severely, I managed to get myself carried down in a litter to Kan-chou.

During a ten days' halt there I experienced much kindness from Father Van Eecke and other Belgian missionaries, and received the first confused news of the great European conflagration. Then I set out by the third week of August for the long-planned journey through the Pei-shan Gobi. It was to take me back to Turkestan for the work of the autumn and winter. Eight long marches brought me to Mao-mei by a new route skirting the hills on the right bank of the river of Kan-chou, and allowed me to view the remains of the late mediæval "Great Wall" which runs on to, and ends near, Su-chou. The complete decay into which it has fallen for considerable distances, notwithstanding its relatively recent origin, helped me to appreciate all the more the time-resisting solidity which the methods of construction employed by the engineers of Han times had assured to their *Zimes* wall. I reached Mao-mei exhausted by the effort which it had cost me to do this journey on horseback, because of the severe strain to my leg. But I found there my brave camels safely arrived and was cheered by Lal Singh rejoining me. By exceptional efforts my indefatigable old travel companion had succeeded in extending our Nan-shan surveys eastwards over an area quite as large as that mapped in 1907.

On 2 September 1914 we commenced the journey which was to carry us right across the great desert area occupied by the ranges of the Pei-shan, where its width is greatest, in the direction from south-east to north-west. The routes we followed for close on 500 miles had never been surveyed, and I knew that only at one point, the cross-roads of Ming-shui, could we expect to touch ground the position of which was known relative to the routes previously visited by Russian travellers. Wherever possible we moved in two parties and by different routes, in order to increase the extent of the area mapped. For this purpose I had secured at Mao-mei the only two guides available, both Chinese. But their local knowledge, even when combined, proved very inadequate, and after less than half of the journey it gave out altogether. We were thus obliged to trust largely to the guidance of the faint caravan tracks traceable and to what information we

opportunately obtained at the single small Mongol camp encountered. The scarcity of wells and of grazing implied serious risks in this mode of progress and made it an anxious time for me, especially as I had found the strain of riding too painful and was obliged to direct our moves from an improvised pony litter.

It was reassuring when, after passing the well of Ming-shui, the great snowy mass of the Karlik-tagh came into view, far away to the north-west, and served to direct us in the rough. But great difficulties still awaited us in the last barren hill range through which we had to make our way, owing to want of water and the very confused and, in places, rugged configuration of its valleys. It proved an easternmost extension of the T'ien-shan system. When we had safely emerged from it through narrow tortuous gorges which ever threatened to stop our camels far away from water or grazing, it was a real relief to look down on the open Dzungarian slopes and sight some 15 miles away a tiny spot of dark trees. It was the little village of Bai, for which I had wished to make all the time, and after nearly four weeks of continuous travel it was no small satisfaction to have safely reached it without the loss of a single animal. There was reward for our troubles in the extensive plane-table surveys, supported here as all through our journeys by astronomically observed latitudes and by many careful height observations with mercurial barometer and clinometer. They will throw fresh light, I hope, on the morphology of the Pei-shan ranges.

A rapid journey subsequently carried me during October along the north foot of the eastern portion of the T'ien-shan range, already bearing its first winter snow, to Barkul and Guchen (Ku-ch'êng-tzŭ). The ground crossed here, topographically better known, had a special interest for me as it helped to acquaint me with the peculiar physical conditions of a region through which many of the great historical migrations westwards, like those of the Yüeh-chih or Indo-Scythians, Huns, and Turks, must have passed. These valleys and plateaus of Dzungaria, favoured by a climate less dry and possessed of abundant grazing-grounds, have often played an important part in the history of Eastern Turkestan. They have again and again afforded a temporary home to nomadic tribes. These could never have maintained their flocks and herds in the arid planes of the Tarim Basin; but they were always able from across the T'ien-shan to carry out their raids into it and exact tribute from its flourishing oases. I could observe a curious if faint reflex of those great tribal movements in the numerous camps of Muhammadan Kazaks, fine men of Turkish speech and descent, whom the Mongols had driven south under Chinese protection since they secured the "independence" of Outer Mongolia.

After leaving Guchen I surveyed, near Jimasa, the remains, extensive but badly decayed, marking the site of an ancient capital of this region, which under the names of Chin-man and Pei-ting often figures in the Chinese Annals from Han to T'ang times. Its connection with the Turfan oases to the south had been a very close one from an early historical

period, and as Turfan was to be my base for the winter's labours I was very glad to march there by the most direct route, hitherto unsurveyed. It led me across the Bogdo-ula range, a rugged portion of the T'ien-shan rising to numerous snowy peaks, by a pass close on 12,000 feet (Fig. 18), and once again confirmed the accuracy of the early Chinese itineraries in which this route is described.

The first week of November 1914 found the four parties into which my expedition had divided since September safely reunited at Kara-khoja, an important ancient oasis in the centre of the Turfan depression. A combination of geographical and archaeological reasons had made me fix upon Turfan as the base and chief ground for our labours of the ensuing winter. It was certainly the natural and most convenient starting-place for the series of tours I was anxious to organize for the exploration of unknown or as yet inadequately surveyed portions of the Kuruk-tagh and Lop deserts to the south. I myself, ever since my brief visit of 1907, had felt drawn back to Turfan by the hope that its abundant ruins of Buddhist times were not yet completely exhausted, even though, easily accessible as they are, within or quite close to oases, they had received much attention from successive archaeological expeditions, Russian, German, and Japanese. Finally, geographical and antiquarian interests united in prompting me to make an accurate large-scale survey of the 'Turfan Basin; for, apart from its containing in its terminal salt lake what probably is one of the deepest depressions below sea-level of our globe, there is the important fact that, within close topographical limits, and hence in a concentrated form, as it were, it exhibits all those characteristic physical features which make its great neighbour and counterpart, the Tarim Basin, so instructive both to the geographer and historical student.

This detailed survey of the 'Turfan depression, on the large scale of 1 mile to an inch and with clinometrically observed contours, was taken in hand by Surveyor Muhammad Yakub almost as soon as he had joined me after a difficult desert crossing from the terminal drainage basin of Hami or Kumul. A few days later I could send off R. B. Lal Singh, pining as always for fresh hard work, to the Kuruk-tagh. The rapidly increasing cold, felt even here close to sea-level, gave hope by then that he would be able to overcome the difficulties arising in those truly "Dry Mountains" from the want of drinkable water, by the use of ice formed on salt springs—or of snow if such happened to fall.

With my remaining two Indian assistants I had already started the archaeological labours that were to keep us busy for the next three and a half months. The ruined town, known as Idikut-shahri, which was their first scene and adjoins Kara-khoja, has long ago been identified as the site of Kao-chang (or Khocho in early Turki), the Turfan capital during T'ang rule (seventh to eighth century A.D.) and the subsequent Uigur period. Massive walls of stamped clay enclose here an area, nearly a mile square, containing the ruins of very numerous structures, built of sun-dried bricks

or clay. Most of them were Buddhist shrines and several of imposing dimensions. For generations past these débris-filled ruins have been quarried by the cultivators of the adjoining villages in search of manuring earth for their fields, and many of the smaller structures had been levelled to gain more ground for cultivation. Since the excavations made here between 1902-06 by Professors Grünwedel and Von Lecoq, of the Berlin Ethnographic Museum, the villagers had extended their destructive operations in the hope of securing manuscript remains and antiques as valuable by-products for sale to Europeans. Of such finds I was able to acquire a fair number. But it was more satisfactory to find that in some ruins deeper débris strata had escaped exploitation. Their systematic clearing was rewarded by a variety of small but interesting remains, such as fresco pieces, fragments of paintings on paper and cloth, stucco reliefs, illustrating Buddhist art at Turfan. Manuscript fragments in the Uigur, Tibetan, Chinese, and Manichæan scripts were also recovered. The discovery of a hoard of well-preserved metal objects, including decorated bronze mirrors, ornaments, etc., offered special interest, as the large number of coins found with it permits the date of its deposit in Sung times to be fixed with approximate accuracy. Simultaneously with these clearings I had an exact plan of the whole site prepared.

After rapid visits to smaller sites in the eastern portion of the Turfan Basin I turned, towards the close of November, to the ruins in the picturesque gorge of Toyuk. There numerous rock-cut caves, once occupied by Buddhist priests, honeycomb precipitous cliffs rising above the small stream that waters a flourishing little oasis, famous for its grapes. Where the slopes are less steep, narrow terraces have been built, bearing small Buddhist shrines, now in ruins. At the most conspicuous of these the second German expedition had made important manuscript finds. Stimulated by these in their monkey-like emulation, native searchers for antiques had subsequently wrought terrible havoc among ruins which had before remained more or less untouched. Lower down, however, we succeeded in tracing remains of shrines which had been protected by heavy covering masses of débris, and the employment of large numbers of diggers to clear them was easy. After the difficulties to which my previous work at desert sites far away from habitations and water had accustomed me, conditions of work in the Turfan district seemed, in fact, quite "suburban," as it were. In the end we recovered at Toyuk a considerable quantity of fine frescoes and stucco relief pieces. Fragments of Chinese and Uigur texts were numerous.

From Toyuk I proceeded by the middle of December to an important Buddhist site below the village of Murtuk. It occupies a conglomerate terrace on the steep west bank of the stream watering the Kara-khoja oasis, where it breaks in a narrow wild gorge through the barren hill range overlooking the main Turfan depression (Fig. 19). The extensive series of ruined shrines, partly cut into the rock, had been decorated with frescoes

Surveyor Afrazgul in foreground. Clouds above head of valley hide snowy peak over 22,000 feet.

representing scenes of Buddhist legend and worship in a great variety of subject and style. In richness and artistic merit they surpassed any similar remains in the Turfan region, and recalled the pictorial wealth of the "Thousand Buddhas" caves near Tun-huang. In 1906, Professor Grunwedel, with his intimate knowledge of Buddhist iconography and art, had carefully studied these big wall paintings, and a considerable selection of fresco panels was then removed to Berlin. For long centuries the frescoes had been liable to suffer casual injury at the hands of iconoclast Muhammadan visitors. During recent years they had been exposed to even greater damage from natives, who, in vandal fashion, cut out small pieces for sale to Europeans. The risk of further destruction in the near future was only too obvious, and careful systematic removal presented the only means of saving as much as possible of these fine remains of Buddhist art. Fortunately, I could utilize for this long and difficult task the trained skill and manual experience of Naik Shams Din. Working with devoted energy, and valiantly helped by Afrazgul, he successfully accomplished it in the course of six weeks. Carefully drawn plans had been prepared for their guidance. Meanwhile I was able to pay a rapid visit to Urumchi, the provincial headquarters, where I had the great satisfaction of seeing again my old Mandarin friend, learned P'an Ta-jên, then holding high office as Financial Commissioner of the 'New Dominion.' As on my former journeys he did his best to help me in my scientific aims.

Early in January 1915 work had progressed sufficiently to allow me to apply myself to the clearing of smaller Buddhist ruins near Murtuk, and then to a task which proved as fruitful as it was to me novel and in some ways unpleasant. Below the debouchure of the gorge which brings down the streams of Murtuk and Sengim, and above the large village of Astana adjoining Kara-khoja from the west, there extends over the gravel-covered waste a vast ancient burial-ground. It is marked by small mounds covered with stones and by low lines of embanked gravel which enclose these mounds to form scattered groups. The mounds indicate the position of tomb chambers which are cut into the underlying hard layer of fine conglomerate or sandstone. A narrow rock-cut passage, originally filled in again, led deep down to the entrance of each tomb, which itself was closed with a wall. Most of these tombs appear to have been searched for valuables during the last Muhammadan rebellion, and probably also earlier. But drift-sand had completely closed up the passages of approach, and only during the last few years had the tombs attracted attention from local antiquic-hunters. Their operations had not proceeded far, and gave anyhow useful assurance as to the absence of any local prejudices.

Willing labour could be secured in plenty, and made easy the opening of very numerous tombs in rapid succession. The systematic search of each has conclusively demonstrated that the cemetery dates from the early T'ang period, and mainly the seventh century A.D. Then Kao-chang, the present Turfan, was an important administrative centre and garrison of the

On February 16 I left Turfan for the Kuruk-tagh, and having secured from Singer Abdur Rahim's youngest brother as guide, examined several localities in the mountains westwards, such as P'o-ch'êng-tzū and Shindi, where traces of earlier occupation were reported. The succession of remarkably rugged ranges and deeply eroded valleys through which we had to thread our way contrasted strikingly with the appearance of worn-down uplands presented by most of the Kuruk-tagh eastwards. I was able to map here a considerable extent of ground which had remained unsurveyed. Apart from another brother of Abdur Rahim, who was grazing his flocks of sheep in the gorge of Shindi, and a solitary Turki who was taking supplies to a spot where a few Chinamen were said to dig for lead, we met no one. The absence of springs or wells precludes the regular use of what scanty grazing is to be found in the higher valleys. Yet in the Han Annals this westernmost portion of the Kuruk-tagh is referred to as a sporadically inhabited region under a separate chief.

Over absolutely barren gravel wastes I then made my way south-eastwards to the salt spring of Yardang-bulak, or *recte* Dolan-acichik, at the extreme foot of the Kuruk-tagh, where wild camels were encountered in plenty. Taking my ice-supply from there, I proceeded by the second week of March into the waterless desert south, and mapped there the dried-up ancient river-bed, which once had carried the water of the Konche-darya to the Lou-lan sites, over the last portion of its course left unsurveyed last year. The season of sand-storms had now set in, and their icy blasts made our work here very trying. It was under these conditions, fitly recalling the previous year's experience at the Lou-lan cemeteries, that I explored two ancient burial-grounds of small size, which were found on clay terraces rising above the wind-eroded plain. The finds closely agreed with those which the graves, searched on the fortified Mesha in the extreme north-east of Lou-lan, had yielded. There could be no doubt that the people buried here had belonged to the autochthonous population of hunters and herdsmen living along the 'Dry River' until the tract became finally desiccated in the fourth century A.D. The objects in these graves and the clothes of the dead strikingly illustrated how wide apart in civilization and modes of daily life these semi-nomadic Lou-lan people were from the Chinese frequenting the ancient high-road which passed by the dried-up river.

I had been eagerly looking out along the foot of the Kuruk-tagh for traces of Afrazgul, who was overdue, and had taken the precaution to leave messages for him under cairns. So it was a great relief when, the day after my return to Yardang-bulak, he safely rejoined me with his three plucky Turki companions, including doughty Hassan Akhun, my camel factotum, and Abdul Malik, a fourth hardy brother from Singer. Considering the truly forbidding nature of the ground they had to traverse, and the length of the strain put on our brave camels, I had reason to feel anxious about the safety of the party. Now I was cheered by the completeness with

which Afrazgul had carried through the programme I had laid down for him. Having gained Altunish-bulak by the most direct route and taken his supply of ice there, he had explored certain ancient remains in the extreme north-east of the once-watered Lou-lan area, for the examination of which I had been unable to spare time on last year's march.

He then struck out for the point where the ancient Chinese route had entered the salt-encrusted bed of the dried-up sea, and thence traced its shore-line to the south-west, until he reached, at Chainut-köl, the northern edge of the area, where the spring floods of the Tarim finally spread themselves out, to undergo rapid evaporation in lagoons and marshes. He arrived, as I had intended, just in time before the usual inundation could interfere with his progress. After a few days' rest, with water and grazing for the camels, he turned into the wind-eroded desert north, and traced more remains of the ancient settlement discovered a year before along the southernmost branch of the 'Dry River.' Finally, after crossing an area of formidable high dunes, he gained the foot of the outermost Kuruk-tagh. From this exceptionally difficult exploration, which had kept the party from contact with any human being for a month and a half, Afrazgul brought back, besides interesting archæological finds, an accurate plane-table survey and detailed diary records. It is impossible here to discuss the results. But when considered with those which the previous year's surveys had yielded they will, I feel confident, help to show the so-called Lop-nor problem in a new light.

We subsequently moved west to the point known as Ying-p'an, where the ancient bed of the Kuruk-darya is crossed by the Turfan-Lop track. I made use of a short halt there for exploring the interesting remains of a ruined fort and small temple site, found some miles beyond at the debouchure of the dried-up stream of Shindi, and first noticed by Colonel Kozloff and Dr. Hedin. The finds we made here of fragmentary Kharoshthi records on wood and of Han coins were important as proving that the ruins belonged to a fortified station occupied during the early centuries of our era when the ancient Chinese high-road coming from Lou-lan passed here. The station was meant to guard an important point of the route where it must have been joined by the road leading up from Charchan and Charkhlik. That it held a Chinese garrison became evident from the remains we found on clearing some well-preserved tombs in a scattered cemetery near by. There was definite evidence showing that the site abandoned for many centuries had been reoccupied for a while during Muhammadan and relatively recent times. Now the water needed for irrigation is wholly wanting.

Proceeding from Ying-p'an I first surveyed in the desert westwards the ancient bed, still marked by its rows of fallen dead trees, in which the waters of the Konche-darya had once passed into the 'Dry River' of Lou-lan. My subsequent journey to Korla, by a route leading through the desert north-westwards, and first followed by Dr. Hedin in 1896,

enabled me to explore the remains of an ancient line of watch-stations extending for over 100 miles along the foot of the Kuruk-tagh. These watch-towers, some of them remarkably massive and well-preserved, showed the same characteristic features of construction with which my explorations along the ancient Chinese *Limes* of Kansu had made me so familiar. There can be little doubt, I think, that these towers date back to approximately the time (*circ.* 100 B.C.) when the Emperor Wu-ti had the route leading from Tun-huang towards Lou-lan protected by his wall and line of watch-stations. From the great height and intervening distances of the towers, as well as from other indications, it may be safely inferred that they were primarily intended for the communication of fire signals, such as are frequently mentioned in the early Chinese records I recovered from the Tun-huang *Limes*.

The need for such signalling arrangements must have been specially felt here, as it was mainly from the direction of Kara-shahr and Korla that the Hun raids must have proceeded, which we know from the Annals to have more than once threatened the Chinese hold upon Lou-lan and the security of their route to the Tarim Basin. With the gradual extension of Chinese political influence north of the T'ien-shan these conditions changed, and subsequently the abandonment of the Lou-lan route, and the desiccation of the region it led through, must have greatly reduced the importance of this ancient line of communication along the Konche-darya. Yet the line marked by the towers appears to have continued in use as a high-road down to T'ang times, as was shown by the finds of coins, torn documents on paper, etc., we made on clearing the refuse heaps near them.

My visit to the quasi-peripatetic modern colony of Kara-kum on the upper Konche-darya gave me opportunities for curious observations about irrigation conditions and Chinese administrative methods; but I cannot pause to describe them. At the large and flourishing oasis of Korla higher up the river I had soon the satisfaction of seeing, by the beginning of April, our four surveying parties safely reunited. Lal Singh had succeeded in carrying his triangulation from Singer through the western Kuruk-tagh to the snow-covered peaks north of Korla. His dogged perseverance had triumphed over exceptional difficulties, both from the very broken nature of the ground and the adverse atmospheric conditions, which a succession of the violent duststorms usual at this season had created. The reward was the successful linking I had aimed at, of the T'ien-shan range with the system of the Trigonometrical Survey of India.

From Korla we set out on April 6 in three separate parties for the long journey to Kashgar. Lal Singh's task was to keep close to the T'ien-shan and to survey as much of the main range as the early season and the available time would permit. Muhammad Yakub moved south across the Konche and Inchike Rivers to the Tarim, with instructions to survey its present main channel to the vicinity of Yarkand. I sent most of our brave camels with him in order to let them benefit by the abundant grazing

in the riverine jungles after all the privations they had gone through. My own antiquarian tasks obliged me to keep in the main to the long line of oases which fringes the south foot of the T'ien-shan and through which the chief caravan route of the Tarim Basin still passes, just as it has always done since ancient times. Well known as this high-road is over which lay most of my journey to Kashgar, some 900 miles in length, the opportunities it gave for interesting observations, both on the historical geography and the present physical and economic conditions of this northern fringe of oases, were abundant. But here a brief reference to the result of my work round Kucha must suffice.

Three busy weeks spent within and around this historically important oasis enabled me with Afrazgul's help to survey both its actually cultivated area and that which, by the evidence of the numerous ancient sites found scattered in the scrubby desert to the east, south, and west, must have formed part of it. This survey, which archæological finds of interest at a number of ruined sites usefully supplemented, has given me strong grounds for assuming that the area occupied in Buddhist times demanded for its cultivation irrigation resources greatly in excess of those at present available, of which I secured careful estimates. It seems to me clearly established that the discharge of the two rivers feeding the canals of Kucha has diminished considerably since T'ang times. But the antiquarian evidence at present obtainable does not allow us definitely to answer the questions as to what extent this obvious "desiccation" was the direct cause for the abandonment of once irrigated areas, and at what particular periods it proceeded. Here I may also mention in passing that remains of the ancient Han route, in the shape of massive watch-towers, could be traced as far as Kucha, and that their position clearly indicated that the old caravan route had followed the same line as the present one.

After visiting a number of interesting Buddhist ruins in the district of Bai, I travelled to Aksu, where Lal Singh's and my own routes opportunely allowed a brief meeting. He had managed to carry his plane-table survey at three points up to the snow-covered watershed of the T'ien-shan, including the glacier pass below the high massif of Khan-tangri. Help I secured from the obliging Tao-tai of Aksu subsequently enabled him to follow a new route on his way to Kashgar, between hitherto unexplored outer ranges of Kelpin.

Regard for urgent tasks obliged me to move in rapid marches to Kashgar, which was reached on 31 May 1915. There at my familiar base I was received with the kindest hospitality by Colonel (now Brigadier-General) Sir Percy Sykes, who had temporarily replaced Sir George Macartney as H.B.M.'s Consul-General. Though a shooting-trip to the Pamirs soon deprived me of the congenial company of this distinguished soldier-statesman and traveller, I continued to benefit greatly by all the help and comfort which the arrangements made by him assured to me during my five weeks' stay at Chini-bagh.

The safe repacking of my collection of antiques, filling 182 heavy cases, for its long journey across the Kara-koram to Kashmir, and a host of other practical tasks kept me hard at work all through that hot month of June. In the midst of it I felt greatly cheered by receiving the final permission of the Imperial Russian Government for my long-planned journey across the Pamirs and the mountain north of the Oxus, which the kind offices of H.E. Sir George Buchanan, H.B.M.'s Ambassador at Petrograd, at the instance of the Government of India in the Foreign Department, had secured. Considering how long I had wished to see this extreme east of ancient Iran, and that part of the "Roof of the World" under which it shelters, I could not feel too grateful to the Imperial Russian Government for having shown this readiness to give me access to ground which for the most part had never before been visited by any British traveller. Its diplomatic representative at Kashgar, Consul-General Prince Mestchersky, lost no chance of facilitating the arrangements for my journey by kind recommendations to the Russian authorities across the border. But throughout it was a great comfort to feel, during that time of preparation, and still more on actual travel, how much of that kind help and attention I directly owed to Lord Hardinge, and the alliance of the British and Russian Empires he had done so much to render possible.

By 6 July 1915 I was able to leave Kashgar for the mountains westwards, after having completed all arrangements for the safe passage of my eighty heavy camel-loads of antiques to India. But the summer floods in the K'un-lun valleys, due to the melting glaciers, would not allow the valuable convoy to be started at once towards the Kara-koram passes. So R. B. Lal Singh, to whose care I had to entrust it, had set out in the meanwhile to complete our topographical labours in Turkestan by a careful survey of the high snowy mountains, which continue the Muztagh-ata range to the headwaters of the Kashgar River. Before he rejoined me for manifold final instructions I could enjoy a week of delightful seclusion for much urgent writing work, on a small fir-clad alp above the Kirghiz camp of Bostan-arche (Fig. 20). Lower down in the valley my brave hardy camels had enjoyed weeks of happy grazing in coolness, badly needed after all their long travels and trials. When the time came for my start, I confess I felt the final separation from them almost as much as the temporary one from my devoted Lal Singh. Of my other assistants I kept by me only young Afrazgul, whom I knew to be ever useful, even where survey work or digging could not be done. The rest were to accompany my collection to India.

It was with a delightful sense of freedom that on July 19 I started from my mountain camp for the high Ulugh-art Pass and the Pamirs beyond. For across them the road lay now open for me to those mountain regions north of the Oxus, which by reason of their varied geographical interest and their ethnic and historical associations have had a special fascination

for me ever since my youth. On the following day I crossed the steep Ulugh-art Pass, about 16,200 feet above sea-level, flanked by a magnificent glacier some 10 miles long. There I felt duly impressed with the fact that I had passed the great meridional mountain barrier, the ancient Imaos, which divided Ptolemy's "Inner" and "Outer Scythia," as in truth it does now Iran and Cathay. The same night, after a 33 miles' walk and ride, I reached the camp of Sir Percy Sykes returning from the Pamirs, and next day enjoyed a time of happy reunion with him and his sister, that well-known traveller and writer, Miss Ella Sykes.

Five days of rapid travel then carried me over the northernmost Chinese Pamirs and up the gorge of the westernmost headwaters of the Kashgar River, until I struck the Russian military road to the Pamirs on the Kizil-art Pass where it crosses the Trans-Alai range. At the little rest-house of Por-döbe, which I reached that evening on my descent from the pass, I soon received most encouraging proof of the generous and truly kind way in which the Russian political authorities were prepared to facilitate my travels. There I had the good fortune to meet Colonel Ivan D. Yagello, who holds military and political charge of the Pamir Division, including now also Wakhan, Shughnan, and Roshan; he was then just passing on a rapid visit to Tashkend. I could not have hoped even on our side of the Hindukush border for arrangements more complete or effective than those which proved to have been made on my behalf by this distinguished officer. It was for me a great additional pleasure to find in him an Oriental scholar deeply interested in the geography and ethnography of the Oxus regions, and anxious to aid whatever investigations could throw fresh light on their past. It was mainly through Colonel Yagello's unfailing aid that I succeeded in covering so much interesting ground, far more than my original programme had included, within the available time and without a single day's loss. I shall always look back with sincere gratitude to his friendly interest and all the generous help which he and his assistants, officers at the several Russian Pamir posts, gave me.

One of the chief objects which I had in view, when planning this extension of my journey across the Pamirs and the Russian territories on the Oxus, was to study there questions of historical geography, in the way which experience elsewhere in the East had taught me to be the best, *i.e.* on the spot. Hence it was a special satisfaction to me that at the very start I was able to march down the whole length of the big Alai Valley, a distance of over 70 miles. In the topographical configuration, climatic conditions, and local resources of this great Alpine basin I could trace additional indications supporting the belief that through this wide natural thoroughfare, skirting the northern rampart of the Pamirs from east to west, passed the route which the ancient silk traders from China followed down to the Middle Oxus, as outlined by that much-discussed record of classical geography where Marinus of Tyre describes the progress in the opposite

direction of the agents of "Maës the Macedonian" from Bactria to the great silk mart in "the country of the Seres" or China. Similar observations make it appear to me very probable that the famous "Stone Tower" mentioned in that record must be located at or near Daraut-kurghan, a small Kirghiz village and now a Russian frontier customs post, where the route up the main Kara-tegin Valley emerges upon the Alai; it is the only direct one between Bactria and Eastern Turkestan which is practicable throughout for laden camels.

From Daraut-kurghan, where our supplies could conveniently be replenished, I turned south to strike across the succession of high snowy ranges which separate the headwaters of the Muk-su and the rivers of Roshan and Shughnan from the uppermost Oxus. It was the only route, apart from the well-known one leading across the Kizil-art and past Lake Kara-kul, by which I could cross the Russian Pamirs and their western buttresses from north to south, and this accounted for my choosing it. But it proved a distinctly difficult route to follow, even with such exceptionally hardy animals as Colonel Yagello's orders secured for me from the rare Kirghiz camps encountered. There was, however, abundant reward in the mass of interesting geographical observations to be gathered and in the splendid views which it offered into a region of permanent snow and ice little explored and in parts still unsurveyed.

As far as the Tanimaz River, a large tributary of the Bartang or Murghab River, our route led past a grand glacier-clad range, vaguely designated as Sel-tagh or Muz-tagh, and still awaiting exact survey, which forms, as it were, the north-western buttress of the Pamirs. Rarely have my eyes in the Himalaya, Hindukush, or Kun-lun beheld a sight more impressive than the huge glacier-furrowed wall of the "Muz-tagh" (Fig. 21) as it rose before me with magnificent abruptness above the wide torrent beds of the Muk-su, after I had crossed the Tars-agar, our first pass from the Alai. Its boldly serrated crest-line seemed to rise well above 20,000 feet, and individual ice-peaks may reach a considerably greater height. No approximately exact elevations seem so far to have been determined with the theodolite or clinometer for this and some other prominent ranges towering above the western portion of the Pamirs, and neither Afrazgul nor myself could help feeling again and again regret at the obvious considerations which precluded our attempting survey work however modest in scope. Subsequently it was a real satisfaction to come across evidence of the systematic triangulation work which the Topographical Service of Russian Turkestan has been extending over the Pamirs for some years past, and to learn that it was steadily being continued in spite of the war.

Our direct route past the Sel-tagh would have led up the valley by which the Zulum-art and Takhta-koram passes, giving access to the Kara-kul and Tanimaz drainage areas, are approached. But the floods fed by the huge Sel-darra Glacier completely close this route from spring time till the

late autumn, just as they render the track lower down the Muk-su quite impracticable for the greater part of the year.* So we were obliged to make our way first over the glacier pass, *circa* 15,100 feet high, at the head of the Kayindi gorge. The latter proved to be completely blocked in places by ancient moraines and offered very difficult going. Here, as elsewhere, in the high mountains west of the Pamirs, evidence could be noted of glaciation having considerably receded during recent times.

Beyond the Kayindi the ground assumed a much easier Pamir-like character, and after crossing the Takhta-koram Pass, *circa* 14,600 feet, we reached on August 8 the first encampment of Kirghiz grazing in the open valleys to the south-west of the Great Kara-kul. Having obtained there fresh transport from imposing old Kokan Beg, the Ming-bashi of the northern Pamirs, and having started my anthropometric work, I moved down the Tanimaz Valley to its junction with that of the Murghab or Bartang River. Here at the picturesque hamlet of Saunab, the Tash-kurghan of the Kirghiz, I reached the first Iranian-speaking settlement of hill Tajiks or Ghalchas, all fine-looking men (Fig. 22). Their ethnic type of pure *Homo alpinus*, their old-world customs, preserved by alpine isolation, and the survival of much that seems ancient in domestic architecture, decorative motifs, etc., interested me greatly and amply justified a day's halt, which allowed me to secure anthropological measurements and arrange for the load-carrying men we needed.

The only route open to us for reaching the southern Pamirs led up by the Bartang River, and progress in its narrow gorges proved exceptionally trying owing to the results of the great earthquake of 18 February 1911, which had transformed the surface of this mountain region in a striking fashion. Already on the lower Tanimaz we had come upon huge masses of rock débris which had been thrown down from the slopes of the flanking spurs and now spread for miles across the open valley bottom. Here in the defiles of the Bartang the huge landslides attending that memorable earthquake had choked up in many places the whole river passage and practically destroyed what tracks there ever existed along or above it. The big river once rivalling in volume the main feeder of the Oxus, the Ab-i-Panja, had here ceased altogether to flow. Strings of deep alpine tarns, with colours of exquisite beauty, had replaced it here and there and helped to increase the difficulties of progress (Fig. 23). It took three days' hard scrambling along steep spurs almost impassable for load-carrying men, and over vast slopes of rock débris spread out in wildest confusion, to get beyond the point near the mouth of the Shedau side valley (Fig. 24), where the fall of a whole mountain has completely blocked the river, and

* This Muk-su gorge is in places even during winter too difficult for laden animals. To find it actually marked in a recent cartographical representation as traversed by the ancient silk trade route seemed an illustration of the risks which beset the work of the historical geographer when it has to be done solely in the study.

converted the so-called "Sarez Pamir" into a fine alpine lake over 15 miles long now and still spreading up the valley.*

Enormous masses of rock and detritus had been shaken down from the range on the north and had been pushed by the impetus of the landslide up the steep spur flanking the Shedau debouchure. They had thus formed a huge barrage which even now seemed to rise more than 1200 feet above the level of the new Sarez Lake, and is likely to dam it up for years, if not for centuries. It cost another day's stiff, and in places risky, scramble before we succeeded in getting the baggage safely across the few miles of precipitous rock slopes and dangerous débris-shoots above the Yerkht inlet. Fortunately the men collected from the uppermost hamlets of the Roshan Valley proved all excellent cragsmen and quite expert in building *rafaks* or galleries of brushwood and stones along otherwise impassable precipices.

Opportunely succoured by Kirghiz ponies, which had been sent from the Alichur Pamir to meet us, we crossed the Langar Pass, close on 15,000 feet above the sea, by August 20. It gave us easy access to the Yeshil-köl Lake, where I found myself on ground of varied geographical interest. I can mention only two points here and those in all briefness. On the one hand, with the experience gained at the newly formed big lake fresh before me, it was easy to recognize those topographical features which clearly point to the Yeshil-köl having derived its existence from a similar cataclysm at some earlier period. To the eyes of the non-geologist the formation of the Buruman ridge, which closes the western end of the lake, seemed to bear a close resemblance to the newly formed barrage which has created the Sarez Lake. Of glacier action, which might have produced the same result, I could see no trace on either side of the Yeshil-köl exit. On the other hand, what I observed on my way up the open Alichur Pamir, and subsequently in the main Shughnan Valley below it, bore clear evidence to the advantages which the route leading through them had offered for Chinese expansion to the Upper Oxus and Badakhshan ever since Kao Hsien-chih's memorable Pamir and Hindukush campaign of 747 A.D.

Having crossed the Bash-gumbaz, our fourth pass over 15,000 feet since leaving the Alai, I descended to the glittering big expanse of Lake Victoria or Zor-köl, where the Great Pamir branch of the Oxus rises, and the Pamir borders of Russia and Afghanistan meet. Ever since my youth I had longed to see this, the truly "Great" Pamir and its fine lake, famous in early local legends, and the "Great Dragon Lake" of the old Chinese pilgrims. As I looked across its deep blue waters to where in the east

* In an important paper (*Comptes rendus de l'Académie des Sciences*, clx, pp. 810 sqq., Paris, 1915), reference to which I owe to Mr. E. Heawood's kindness, Prince B. Galitzine has shown strong reasons for the belief that the Sarez landslide was not the consequence but the cause of the earthquake of 18 February 1911, which was registered at many distant seismological stations. This earthquake is declared to present an exceptionally interesting case where the epicentre can be proved to coincide with the hypocentre itself. •

they seemed to fade away on the horizon, I thought it quite worthy to figure in early tradition as the legendary central lake from which the four greatest rivers of Asia were supposed to take their rise. It was a delightful sensation to find myself on ground closely associated with the memories of those great travellers, Hsüan-tsang, the saintly Chinese pilgrim-geographer, Marco Polo, and Captain Wood, the first modern explorer of the Pamir region.

The day of halt, August 27, spent by the sunny lake-shore, undisturbed by any sign of human activity, was most enjoyable, in spite of the bitterly cold wind sweeping across the big alpine basin, *circa* 13,400 feet above sea-level. It allowed me to gather local information, which once more confirmed in a striking fashion the accuracy of the Chinese historical records. In describing Kao Hsien-chih's expedition across the Hindukush, the T'ang Annals specially mention the concentration of the Chinese forces by three routes from east, west, and north, upon Sarhad, the point on the Ab-i-Panja branch of the Oxus, which gives direct access to the Baroghil and Darkot Passes. The routes from the east and west, *i.e.* down and up the Ab-i-Panja Valley, were clear beyond all doubt. But of the northern route no indication could be traced in maps or books, and the existence of a pass, vaguely mentioned in native intelligence reports as possibly leading to Sarhad, across the high snowy range south of the Great Pamir, had been denied by members of the British Boundary Commission of 1895 who visited this region.

It was hence a pleasant surprise when inquiries from two much-travelled Kirghiz among our party elicited definite and independent evidence as to an old track still used by Tajik herdsmen, which leads from Sarhad across the range to the glacier-filled head of the Shor-jilga Valley, clearly visible from Lake Victoria, and thence down to the western shore of the latter. All I could observe through my glasses, and what I had seen in 1906 from the other side of the mountain range, seemed to plead for the accuracy of the Kirghiz' information. My only regret was the impossibility of testing it on the spot. This, alas, would have necessitated my trespassing on His Afghan Majesty's territory. How often did I later on, too, look wistfully across the boundary drawn by the River Oxus with the fond wish that I might yet be allowed to pass "through the gate of favour" into those fascinating valleys and mountains on the Afghan side of the border, which I was now able to skirt for hundreds of miles!

Three rapid marches down the Great Pamir River then carried me to Langar-kisht, where we reached the main Oxus Valley (Figs. 25, 26), and the highest of the villages on the Russian side of the river. Here, too, everything was done by the Commandant of the Russian frontier post and the local Wakhi headmen to facilitate my journey. My subsequent journey down the Oxus was attended by an abundant harvest of observations bearing on the historical topography, archæology, and ethnography of Wakhan, which in early times had formed an important thoroughfare between Bactria,

India, and the Central-Asian territories controlled by China. But it would cost too much time and space if I attempted here to give any details. It must suffice to mention that the exact survey of a series of ruined strongholds, some of them of very considerable extent, acquainted me with numerous features of distinct archaeological interest in their plans, the construction and decoration of their bastioned walls, etc. (Fig. 28). The natural protection offered by unscaleable rock faces of spurs and ravines was always cleverly utilized in these defences. But some idea of the labour, which even thus their construction must have cost, can be formed from the fact that at one of these strongholds, known as Zamr-i-atish-parast, the successive lines of walls, with their bastions and turrets solidly built in rough stone or in sun-dried brick, ascended the slopes of a precipitous spur over 1000 feet high, and have an extent of more than 3 miles.

It is certain that these hill fastnesses date back to pre-Muhammadan times and to a period when this portion of the Oxus Valley contained a population far denser than at present and enjoying a higher degree of material civilization. Their attribution by the present Wakhi people to the "Siahposh Kafirs" merely gives expression to a vague traditional recollection that they date back to times before the advent of Islam, the "Siahposh" of Kafirstan south of the Hindukush never having reached the stage of civilization which these ruins presuppose. Some architectural details seemed to suggest a period roughly corresponding to late Indo-Scythian or early Sassanian domination, during which our scanty records from Chinese sources indicate that Wakhan enjoyed a state of relative affluence and importance.

All along the big valley of Wakhan there opened glorious vistas to the south, where towering above narrow side valleys, and quite near, appeared magnificent ice-clad peaks of the Hindukush main range (Fig. 27), looking just as early Chinese pilgrims describe them, like peaks of jade. I realized now what an appropriate invention the "popular etymology" was, which in Muhammadan times has connected the old and much-discussed name of *Bolor*, vaguely used for the Hindukush region, with the Persian *billaûr*, meaning crystal. The effect was much heightened by the unexpectedly verdant appearance which the cultivated portion of Wakhan still presented at that season, in spite of the elevation from 8000 to over 10,000 feet above sea-level, and doubly welcome after the bleak Pamirs. It was pleasant to note abundant evidence of how much the resources of the Wakhis on the Russian side of the valley had increased, both in respect of cattle and sheep and of land brought under cultivation, since annexation under the settlement arrived at by the Anglo-Russian Pamir Boundary Commission had removed all trouble from Kirghiz raids and Afghan exactions.

For all these reasons I felt glad that plentiful antiquarian and anthropometric work kept me busy in Wakhan during the first half of September. To this was added a philological task when, on entering that portion of the valley which adjoins the great northward end of the Oxus and is known

FIG. 27.—VIEW ACROSS OXUS VALLEY TOWARDS GLACIERS OF HINDUKUSH RANGE NEAR ISHMARG PASS.

as the tract of Ishkashim, I could collect linguistic specimens of the hitherto unrecorded *Ishkashmi*, one of the so-called Pamir dialects which form an important branch among the modern representatives of the Eastern Iranian language group. At the pretty little Russian post of Nut, which faces the main settlement of Ishkashim, I enjoyed the kind hospitality of Captain Tumanovich, its commandant, and benefited much by his local knowledge and help. Then I passed down the Oxus through the very confined portion of the valley known as Gharan, which until the recent construction of a bridle-path with Russian help was ground very difficult of access, even on foot, and visited Colonel Yagello's headquarters at Kharuk. It lies at the fertile debouchure of the Shughnan valleys, where the cart road now crossing the Pamirs ends, and proved a very pleasant spot, boasting of fine fruit gardens, and to my surprise, even of electric light.

The relative abundance of fertile arable land and the facility of communication both with the Pamirs and the rich grazing uplands of Badakhshan have always given to the valleys of Shughnan a certain historical importance. They figure often in Chinese and early Muhammadan accounts of the Middle Oxus region. So I was glad to visit in succession the two main valleys of Shakh-darra and Ghund. Considering that the Shughni people have always been noted for their fondness for roaming abroad, in the old days as raiders, and are now as pedlars and servants to be found in all towns from Kabul to Farghana, it was interesting to observe how much of old-world inheritance in ethnic type, local customs, domestic architecture, and implements has survived among them.

From Shitam in the Ghund Valley I crossed by a distinctly difficult glacier pass, over 16,000 feet high, into Roshan. From the watershed, overlooking large and badly crevassed glaciers both to north and south (Fig. 6), I enjoyed a glorious vista over the rolling uplands of Badakhshan, a region towards which my eyes have been turned for many years, and to which access still remains closed. The narrow, deep-cut gorges in which the Roshan River has cut its way through towering mountain masses, wildly serrated above and very steep at their foot, proved a line of progress even more troublesome than the glaciers across which we had reached them. A two days' climbing and scrambling past precipices by narrow rock ledges and frail galleries (*awrinz*), as bad as any I ever saw in the Hindu-kush, was relieved in places by the use of skin-rafts, where the absence of dangerous cataracts allowed their employment. Guided by dexterous swimmers, they made me glide down over the tossing river, forgetful of all fatigue, in scenery of impressive grandeur, amidst rock-walls which ever seemed to close in upon us. But it was a real relief when the last rock gate was passed, and we emerged once more in the less-confined valley of the Oxus.

Roshan, just as it is the least accessible of all the side valleys of the Oxus, seems also to have preserved the *Homo alpinus* type of the Ghalchas

in its greatest purity. The men, clean of limb and made wiry by constant movement over such impossible tracks, all showed clear-cut features, and often faces of almost classical regularity. The hamlets nestling at the mouth of the ravines were often half hidden amidst splendid orchards. The dwellings invariably showed plans and internal arrangements which were obviously derived from high antiquity, so many of the features being familiar to me from the architecture traced at early sites of Turkestan and the Indian North-West. Alpine seclusion seemed to have preserved here a small corner of the world scarcely touched by the change of ages, and I wondered whether some Bactrian Greek on a visit to Roshan would have seen much that was different from what these simple well-built dwellings show now.

After a busy delightful day's halt at Kala-Wamar, in the garden of the ruined castle of the Shughnan chiefs, I crossed the glacier pass of Adude and made my way into the Yazghulam and Vanj valleys of Darwaz, where the territory of the Anir of Bokhara was entered. Here, too, the recommendation of the Imperial Russian political representative, Consul Belaieff, had assured me all possible attention and help. As I travelled up the Vanj Valley, and subsequently through the mountain tract known as Wakhia-bala, I could well observe the gradual change in the physical appearance, houses, ways of living, etc., of the people, bearing testimony to the historically attested conquest of Turki tribes and the influence exercised by the civilization of the Turkestan plains. But we were still high up in the mountains, and had a trying task when on October 3 we crossed the Sitargh Pass, *circa* 14,600 feet high, with its big and badly crevassed glacier, after the first winter snow had fallen, and just in time before it became closed to traffic. Finally, we gained by the Gardan-ikaftar Pass, also under fresh snow, the main valley of Kara-tegin.

Here on the banks of the Kizil-su River, coming from the Alai, I found myself once more on the line of the ancient silk-trade route connecting China with Bactria. A marked change in the climatic conditions was brought home to me by the fact that the fertile slopes on the hillsides are being cultivated without the need of irrigation. Kara-tegin, as its modern name attests, had been long occupied by a Turki-speaking population. It was interesting to note here how the Kirghiz settlers, who represent probably the last wave of this Turkish invasion in what was originally Iranian ground, are now being slowly ousted again from the land by a steady reflux of Tajik immigrants.

From Kara-tegin, where I had interesting opportunities for getting to know the traditional administrative methods of Bokhara, a succession of rapid marches carried me westwards through the open and remarkably fertile valleys which the rivers of Kafirnihan and Surkhan drain. It seemed hard to forego a visit south to the Oxus, where it passes nearest to my old goal of Balkh or Bactra. But time was getting short for the remaining portion of my programme. So I took the nearest route to the confines of

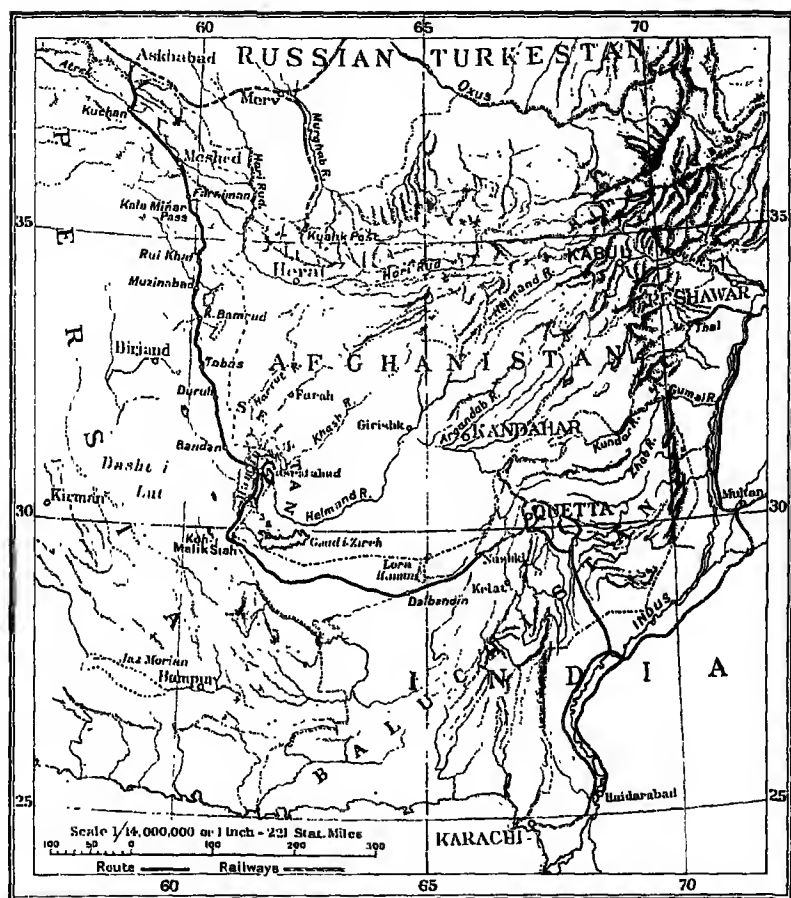

FIG. 30.—SKETCH-MAP SHOWING THE ROUTES FOLLOWED BY SIR AUREL STEIN THROUGH KHORASAN AND BALUCHISTAN.

FIG. 31.—LOWER GATE AND TERRACES ON EAST SLOPE OF RUINED SITE, KOH-I-KHWAJA HILL, SEISTAN.

FIG. 32.—ANCIENT FORTIFIED WATCH STATION, SEEN FROM NORTH-EAST, IN DESERT SOUTH OF SEISTAN OASIS.

ancient Sogdiana north-westwards by the difficult track through the mountains which connects Hissar and Regak with the rich plains about Shahr-i-sabz. Finally, on October 22, I arrived at Samarkand and the Russian Central-Asian railway. Since the start from my camp in the Kashgar Mountains my journey had lasted just over three months, and within these we had covered on foot and on horseback an aggregate marching distance of close on 1700 miles.

A new and distant field of work lay ahead for me on Persian soil. So only a few days could be spared for renewed visits to the great monuments of Muhammadan art and Mughal power at Samarkand. It was the same at Bokhara, where I could personally thank M. Shulga, then officiating as the Imperial Russian representative, as well as the Diwan-begi, the head of H.H. the Amir of Bokhara's administration, for all the kind help and hospitality I had received in the State. So much survives, in that fascinating great city, of old-world Central-Asian life and of its own historical past that my three days' stay seemed a sadly brief time. Then the Trans-Caspian railway carried me to Askhabad, the great Russian cantonment on the Persian border, and crossing this I reached Meshed by November 4 after a four days' hard drive.

There, at the old capital of Khorasan, Colonel T. W. Haig, H.B.M.'s Consul-General for Khorasan, and a distinguished Oriental scholar, offered me the kindest welcome and the chance of a much-needed short rest. Under the hospitable roof of the Consulate and within its fine large garden I felt as if brought back to some English country house. Constant toil at much-delayed official accounts kept me busy and, alas, left little time for glimpses of the interesting city outside. Seistan was my goal for the winter's work, and considering its great distance and the uncertain state of political affairs in Persia, I had much reason to feel grateful for the kind help and shrewd advice by which Colonel Haig facilitated my rapid onward journey.

On November 11 I left Meshed for Seistan. In order to reach it I had chosen a route which, keeping off the main roads, gave opportunities for useful supplementary survey work and offered the further advantage of being the most direct (Fig. 30). It first took us by little-frequented tracks through hills held by Hazara and Baluch tribal settlements to Rui-Khaf. Thence we travelled south in an almost straight line parallel to the Perso-Afghan border, where it passes through a nearly unbroken succession of desert depressions and of equally barren hill ranges. Near a few of the little oases we passed, as at Muzinabad, Tabbas, and Duruh, I was able to examine remains of sites abandoned since early Muhammadan times. At Bandan we struck the high-road, and two days later, on December 1, reached Nasratabad, the Seistan "capital." The excellent Persian mules hired at Meshed had allowed us to cover the total distance of over 500 miles in nineteen marches. With the assistance of Afrazgul Khan a careful plane-table survey on the scale of 4 miles to 1 inch was

carried over the whole ground. The disturbed conditions of Persia due to the war made themselves felt also on the Khorasan border, ever a happy raiding-ground for enterprising neighbours. But owing, perhaps, to the rapidity of our movements and the unfrequented route chosen, the journey passed off without any awkward encounters.

Once safely arrived in Seistan I received a very kind and hospitable welcome from Major F. B. Prideaux, H.B.M.'s Consul in Seistan, and could quickly set to work with all the advantages which his most effective help and prolonged local experience assured me. Ever since my student days I had felt drawn to Seistan by special interests connected with its geography and historical past. It had been more than chance that my very first paper, published as long ago as 1885, dealt with the ancient river names of this Iranian border-land. My present visit to Seistan, long deferred as it was, could for various reasons be only a kind of reconnaissance. Yet even thus I might hope among its numerous ruined sites to discover remains of the early periods when ancient *Sacastana*, "the land of the Sakas or Scythians," served as an outpost of Iran and the Hellenistic Near East towards Buddhist India. A strong additional reason was provided by my explorations in the Tarim Basin; for the striking analogy presented by various physical features of the terminal basin of the Helmand River was likely to throw light on more than one geographical question connected with the dried-up Lop Sea and the ancient Lou-lan delta.

It is a great satisfaction to me that in both directions my hopes have been fully justified by the results of my Seistan work. But it is only the most prominent that I can find space to record here in brief outlines. At the very start my archaeological search was rewarded by an important discovery. It was made on the isolated rocky hill of the Koh-i-Khwaja, which rises as a conspicuous landmark above the central portion of the Hamuns or terminal marshes of the Helmand. The extensive and well-known ruins situated on its eastern slope (Figs. 29, 31) proved to be the remains of a large Buddhist sanctuary, the first ever traced on Iranian soil. Hidden behind later masonry, there came to light remarkable fresco remains, dating back undoubtedly to the Sassanian period. Wall paintings, of a distinctly Hellenistic style and probably older, were found on the wall of a gallery below the high terrace bearing the main shrine. Protected in a similar way from the ravages of man and atmospheric moisture they had unfortunately suffered much from white ants. The importance of these pictorial relics, which I managed to remove safely in spite of various difficulties, is great. They illustrate for the first time *in situ* the Iranian link of the chain which, long surmised by conjecture, connects the Græco-Buddhist art of the extreme north-west of India with the Buddhist art of Central Asia and the Far East. This connection was reflected with equal clearness by the architectural features of the ruins, which were also of great interest.

In the desert south of the present cultivated area we found interesting remains of far earlier times. My search here was greatly facilitated by the excellent topographical surveys on a large scale which had been effected under the direction of Mr. G. P. Tate, of the Survey of India, in connection with Sir Henry McMahon's Seistan Mission of 1902-05, and which proved very helpful also in other parts. On this desert ground which an abandoned old branch of the Helmand had once watered, excessive wind-erosion acting on alluvial clay had produced conditions exactly corresponding to those I had found in the dried-up delta north of Lop-nor. Since moisture and vegetation had deserted this soil, the scouring effect of the sand driven by the north wind that blows over Seistan with more or less violence, but almost constantly during four months of spring and summer, had lowered the level of the ground to varying depths, down to 20 feet or more, below the original level, except where the surface had been protected by hard debris of some kind. The erosion terraces thus left rising island-like above the bare plain were always found thickly covered with prehistoric remains. They consisted of potsherds, often decorated in colours, and stone implements mainly of the Neolithic period, but in places included also relics of the Bronze Age. It was easy to pick up here an abundant archaeological harvest literally on the surface.

It was a very interesting and quite unexpected discovery when in the same area I came upon the remains of a close line of ancient watch-stations, stretching right across the desert from the southernmost Hamun in the direction of the true terminal basin of the Helmand, the marsh and lake-bed of the Gaud-i-Zirreh. It was a fascinating task to trace this Seistan *Limes*, and the experience gained during my explorations along the ancient Chinese border-line once protecting the extreme north-west of Kansu helped me greatly. The fortified frontier posts (Fig. 32), solidly built with bricks of great size on a uniform plan, and, as it were, to "specification," were found always to occupy erosion terraces retaining prehistoric pottery debris. Chosen, no doubt, for the sake of increased command of ground and wider outlook, these elevated positions had helped also to save the ruins from complete destruction by the erosive force of wind and sand. The watch-stations were found at distances from half to about $1\frac{1}{2}$ miles apart. The position of sectional headquarters could also be identified by additional structures, etc.

Seistan, in spite of its dreary arid look, does not enjoy a climate quite sufficiently "desiccated" for archaeological purposes, as it still receives a fairly regular rainfall of *circ.* 2 inches per annum. So the refuse heaps at these stations, which might have furnished us with interesting dateable records, were found to have decayed into mere odorous layers of earth. But a variety of archaeological finds and observations pointed to centuries near the commencement of our era, as the time when this ancient border-line was established. Its object was clearly to protect the cultivated

portion of the Helmand delta against raids of nomadic tribes in the south, corresponding in character and habits, if not in race too, to the present Baluch and Brahui tribes to be found there. I cannot indicate here in detail the curious points of analogy presented to the ancient Chinese frontier line of Kansu constructed *circa* 100 B.C. against Hun raids from Turkestan. But I may hint at least at an interesting question which suggests itself in view of the geographical position. Would one be justified in regarding this fortified desert border of Seistan as a link between that ancient "Chinese Wall" in the desert and the *Limes* lines by which Imperial Rome guarded its marches in Syria and elsewhere in the Near East against barbarian inroads? Only from future researches can we hope for a safe answer.

From these desert surveys I returned to the inhabited portion of Persian Seistan by the beginning of January 1916, and was kept busy during a few weeks with the examination of the numerous ruins surviving there. Almost all proved of mediæval Muhammadan origin or even more recent, a fact which the physical conditions of the present Helmand delta easily account for. At two sites, however, which their high level has protected from the effects of irrigation or periodic inundation, I discovered definite archæological evidence of ancient occupation. At the large ruined stronghold known as Shahrستان, occupying a high alluvial terrace, this included pottery fragments inscribed in early Aramaic characters.

I should have much liked to visit the Afghan portion of Seistan, to the north of the Helmand, where Sir Henry McMahon's Mission and earlier travellers had found a large number of ruins still awaiting expert examination. Permission for such a visit could, however, not be secured, and I did not feel altogether surprised at it. So, after collecting useful anthropometric materials which help to illustrate the curious mixture of races in the population of Seistan, I returned to the desert south and supplemented my survey of the ancient *Limes* by some rapid excavations. They disclosed interesting details as to the construction and internal arrangements of those ruined watch-stations and the life once led there.

Thence I set out by the beginning of last February for the return journey to India, whither most of my archæological finds from Seistan, filling twelve cases, had already preceded me. I travelled by the Seistan-Nushki trade route which the zeal of Captain (now Colonel) F. Webb Ware, of the Indian Political Department, had first pioneered through the desert some twenty years ago. Well known as the route is, this desert journey of close on 500 miles through the wastes of Baluchistan had for me a special interest. I could not have wished for a better modern illustration of the conditions once prevailing on that ancient route through the Lop desert, which the Chinese had opened about 110 B.C. for the expansion of their trade and political influence westwards, and which two years before I succeeded in tracking through those waterless wastes after sixteen centuries of abandonment.

It is true that wells of tolerably good water at most of the stages, comfortable rest-houses at all, and good camel grazing to be found at half a dozen points, made progress along this modern desert track seem child's play compared with what we had gone through. Even in ancient times the physical difficulties successfully overcome by those early Chinese pioneers must have been vastly greater than those which the route to Scistan ever presented in the days before its improvement. And yet the latter, by the political reasons which have necessitated its opening, by its purpose, by the character of the traffic I found moving along it, provided a most striking analogy, and neither as a geographer nor as a historical student could I fail to appreciate its significance.

By February 21 I reached Nushki, whence the railway carried me to Delhi. During my week's stay at the Indian capital I received fresh proof of the kind personal interest with which His Excellency the Viceroy, Lord Hardinge, had from the start followed and encouraged my enterprise. There, too, I was able to meet again some of my oldest friends in India, to whom I had never appealed in vain for such official support as they could give to my scientific labours. A subsequent brief visit to Dchra Dun, the Survey of India headquarters, enabled me to arrange for the suitable publication of the topographical results brought back from this journey, in an atlas of maps. At the same time I secured the admission of Afrazgul Khan to the Survey Department's service under conditions which open up to this capable young assistant the amply deserved prospects of a good career. When I subsequently paid a brief visit to H.H. Sir Michael O'Dwyer, the Lieutenant-Governor of the Punjab, at Lahore, I had the great satisfaction of learning from this kind old friend that the splendid services which R. B. Lal Singh had rendered to Government for a lifetime were to be recognized by a grant of land on one of the new Punjab canals. It meant the realization of my devoted old travel companion's most cherished hope, and a reward such as I had always wished to secure for him. Finally, after the middle of March I reached Srinagar, in Kashmir, my favourite base, from which my expedition had been begun in July 1913. It had lasted close on two years and eight months, and the aggregate of the distances covered by my marches amounted to nearly 11,000 miles.

At Srinagar the 182 cases of my collection of antiquities from Turkestan had safely arrived by October, and there the greatest part of the work demanded by its arrangement and detailed examination will have to be done with the expert help of my old friend and collaborator, Mr. F. H. Andrews, now Director of the Technical Institute and Industrial Art School of the Kashmir State.

The elucidation of the antiquities brought to light by the thousand, and in such great variety of place, time, and character, will involve heavy and manifold labours, and for them and the proper decipherment of the abundant manuscript remains, recovered in about a dozen of different

scripts and languages, the help of quite a staff of expert scholars will be needed. The Government of India, though intending that the whole of my collection shall ultimately be deposited in the new museum planned at Delhi, fully realized that this expert help can for the most part be secured only in this country and in France, where after my former expedition, too, I had found the most helpful and important of my collaborators. So I was given permission temporarily to bring here whatever materials stood in need of specialist examination and research, and to come myself to England for a time to make all necessary arrangements in person. But after all the efforts and toils it has cost to recover those relics of past ages from their safe resting-places in the desert it would have obviously been unwise to expose a great and valuable portion of them to the grave risks to be faced at present on a long sea voyage round the shores of Europe. So I decided to transfer myself only across the seas, and to use a short rest in England for preparing a preliminary record of the results achieved and for organizing well in advance the work of my future collaborators.

After two years of the greatest struggle which the history of mankind has known I returned to England fully prepared for considerable changes, and I found such, some sad, some reassuring and hopeful. But no change has affected the kind interest shown in my scientific efforts by old friends within the Royal Geographical Society and outside, and the encouragement derived from this boon I shall ever remember with gratitude.

Before the paper the PRESIDENT said: Our business this evening is to welcome Sir Aurel Stein, one of our most distinguished Asiatic travellers, on his return from his third journey to the heart of Asia. He needs no introduction here. We have heard him more than once in this hall, and we know how much he has done, not only as a geographer, as a cartographer, as a surveyor, but also as an archæologist. We know that his travels have led him to one of the most interesting regions on the Earth's surface, where from times long before the beginning of our era the trade to and from Europe and the Nearer East crossed the Chinese frontier. Sir Aurel Stein has got so much to tell us that I am sure the best thing I can do is to ask him at once to begin his discourse.

(Sir Aurel Stein then read the paper printed above and a discussion followed.)

MR. AUSTEN CHAMBERLAIN: When I came here to-night as the guest of one of your members, and even when on entering this building you expressed a desire that I should say a few words in the course of the evening, I did not quite understand the position of prominence which you intended to allocate to me, and I am afraid that I am wholly unfitted for it. I am not a Fellow of your Society, and I am afraid if any geographical knowledge, let alone any geographical exploration, is necessary to qualify for that position, I shall never attain to it. My recollections of geography are of a painful study which, laboriously acquired, was inevitably quickly forgotten; a study of maps of which most were already too full, and which it is the business of your Society to crowd with still more details. You and perhaps the audience will feel that

these confessions hardly indicate my fitness for my present position ; but at least I am trying to improve. I had the pleasure of welcoming Sir Aurel Stein at the India Office in virtue of the position I hold there, and though I learned very little from him in the brief and very modest account which he gave me of his travels, it was at any rate sufficient to make me feel the importance of the work which he had done, and the immense interests of the results which he had achieved. I think I may fairly say—for I had nothing to do with his travels at any stage—that he was fortunate in the collaboration of the representatives of two Governments. He had the good will of the Government of India, and, as we are glad to recognize, he enjoyed equally the good will of the Russian authorities. By their aid, and above all by his own indomitable perseverance, his courage, his endurance, and his enthusiasm, he has achieved results which are of interest to all of us, which are of importance to the Governments of India and of Russia, and which, I venture to add, will serve to confirm the high reputation which he has won among explorers. I am not fitted to initiate a discussion of the kind you have invited. I am glad to pay my tribute—and to pay my tribute as Secretary of State for India—to what Sir Aurel Stein has done ; but for a learned discussion of his work you must turn to other and greater authorities.

The PRESIDENT: Mr. Austen Chamberlain has alluded to one of the happiest points in the explorations of Sir Aurel Stein—that they constitute a new link in the friendship between the two great Empires that share the larger part of Asia, England and Russia. We are happy in having here to-night the distinguished Russian officer General Baron Kaulbars. I do not know if he would be kind enough to say a few words to us.

(General Baron Kaulbars bowed his acknowledgments.)

Sir HERCULES READ: I am personally very glad to say a few words in order to bear my small testimony to the extraordinary qualities that my old friend Sir Aurel Stein has brought to bear upon the varied aspects of the journey that he has just described to us. I know nobody among all the explorers whom I have met who has greater capacity for carrying on archaeological and geographical work under conditions that we all can imagine, after having seen that beautiful series of slides he has put before us. In the intervals of extremely tedious marches he has devoted himself to archaeological research in temperatures and climates which are very trying, and, as in former years, he has brought home a collection of antiquarian remains which have opened up fresh fields to archaeologists in these islands. For this we who perforce remain at home are most grateful, and not only to Sir Aurel Stein, but in a very great degree to the authorities at the India Office. The atmosphere at this meeting is naturally a geographical one, and I feel that the importation of archaeological questions is somewhat of an intrusion ; but I can speak only about my own business. Sir Aurel Stein has given us from time to time a *résumé* of his geographical discoveries, using archaeology, if I may say so, as a series of signposts ; and very useful he has found it, as he has confessed. But when one considers that he begins with the Palæolithic period, which you may put back to any remote date, and comes up to something like the seventh or eighth century, and that we have withal not one single piece of these antiquarian remains before us, it is somewhat hopeless to discuss the archaeological questions at present. When these remains come to Europe to be studied they will be distributed amongst a number of distinguished scholars, and will then go back to the central Indian Museum which is to be established at Delhi. That, I am sure, is a very proper place for them. I have myself taken considerable interest in the Museum, and

have gladly given advice on certain administrative points regarding it; but a difficulty I find as an archæologist, domiciled in England and incapable of leaving it for more than a few months, is that there will be no opportunity for European students ever to consult these antiquities, except for those fortunate ones who are able to go anywhere at any time and for as long as they please. Sir Aurel Stein's first antiquarian results were divided between the Government of India and the British Museum. There is no difficulty therefore to some extent in still seeing in England the type of object that was discovered on the first expedition. With regard to the later expeditions the case is different, and I think presents a difficulty for the people living in the British Islands of judging the culture that belongs to Central Asia, to these ancient civilizations, dating from a century or two before our era to several centuries afterwards. Beyond the small collections to be found in Paris, nowhere in Europe will any of these remains be seen. It seems to me a pity that these objects of extraordinary interest, covering almost all periods of human activity and human industry, are not to be represented at all in these islands. I think that some measures should be taken by which adequate representations of these very interesting historical and religious remains should find their place somewhere within reach of the ordinary British citizen.

Sir FRANCIS YOUNGHUSBAND: As a traveller in both Chinese Turkestan and also on the Pamirs I can testify to the splendid exploit of our lecturer this evening. I know well the hardships he must have gone through and the indomitable courage which actuated him in carrying out these explorations. Since the time of the great Russian, General Przevalsky, there has been no traveller in Central Asia who has shown so great a persistence over such a large number of years, and such courage and determination in carrying out his explorations, or has brought back such fruitful results, as Sir Aurel Stein. I wish to congratulate him most sincerely on his magnificent achievement.

Sir HENRY TROTTER: Some years ago I had the pleasure on the occasion of Sir Aurel Stein's last lecture before the Society of congratulating him on the success of his work, and I laid particular stress upon the magnetic influence by which he seemed to attract such very different persons as the Trustees of the British Museum, the Viceroy of India, the *personnel* with whom he worked, and last but not least the Taoshih of the Temple of the Thousand Buddhas. It is gratifying to note that he has by no means lost that magnetic power, as is proved by the record of his journey, the splendid work of his surveyor Lal Singh, and the excellent reception of the lecturer by the Russian and other authorities with whom he came in contact.

I should have liked to have made some remarks on a good many points [see note following the discussion], but the lateness of the hour prevents me from doing so. I will only take up your time with one. I was in Central Asia forty-three years ago and know many parts of the ground described by Sir Aurel. The point to which I wish to refer is the great problem as to the principal source of the Oxus River.

Lord Curzon a good many years ago gave in this hall an account of his travels in the Pamirs, and of his discovery in the mountains of Kanjud of a glacier from which flowed a river that, as he maintained, was the principal source of the Oxus. As a result of my own previous observations I (in common with some Russian geographers) looked upon the Little Pamir Lake, also fed by glaciers, as the principal source. From the lake a river, the Aksu, flows eastward, then north, and then north-west as the Murghabi, and later on as the Bartang River, which joins the Panjah branch of the Oxus a few miles above Kila Wamar, where the river makes a great branch to the west.

Lord Curzon maintained that his (*i.e.* the Panjah) branch was the more considerable of the two. I adduced the testimony of an Indian native surveyor who had visited the spot and clearly proved that the Bartang River at the time he visited it had a much greater flow of water than the Panjah; but Lord Curzon produced the testimony of a reliable European witness to prove that when he visited it, at another season of the year, the Panjah branch contained much more water than the Bartang. Both statements were probably true; but for my part I stuck to my theory. I regret that the lecturer has told us this evening that the Bartang River has now been completely blocked up from the effects of an earthquake, that a large lake has been formed, and that it is unlikely that any water will flow down the Bartang into the Oxus for many years to come. So at last I must confess myself vanquished.

Colonel C. E. YATE: I am delighted to add any words I can to congratulate Sir Aurel Stein on his return. We have all watched the news that has been received from him from time to time with the greatest interest, and are delighted to see him back here again. We are looking forward to seeing the results of his finds displayed here as soon as the roads are safe. As to what has just been said regarding the final disposition of the treasures I too think that a certain amount should remain in this country, and all should not be taken back to India. It seems to me a fair thing to leave some part at any rate for show in this country. I cannot see any reason why all should be taken back to Delhi, as I understand from Sir Hercules Read is the present intention. I congratulate Sir Aurel Stein most heartily on his journey, and we all join in thanking him for the paper he has given us.

Dr. BARNETT: I well remember seven years ago when this Society met to hear Sir Aurel Stein's report of his second expedition and expressed appreciation of his work. It was felt that Sir Aurel Stein had added not only great areas to the Trigonometrical Survey, but even greater realms to knowledge. Further study has confirmed that view, because we have found in result that his second journey was rich to an almost inconceivable degree. His archaeological discoveries throw enormous light on the ancient history of that important region which he has covered, and his literary documents have opened up new areas of literature. Similarly, his ethnological studies have been fruitful. Now Sir Aurel Stein, with his usual habit of eclipsing himself, has returned from a third expedition that has exceeded his former ones in importance, inasmuch as he has nearly doubled the net archaeological proceeds of the last. From the second journey he came home with 96 cases; now he has 182, after having traversed nearly 11,000 miles. I have no doubt that, in the same way as his previous journey was epoch-making in many ways, so the results of this journey will be equally epoch-making, and I feel sure that this Society in honouring him is doing honour to itself.

The PRESIDENT: At this what Dr. Mill would call "fraudulently late hour of the evening" I will not keep you longer, but I am sure you will wish me to say a few words of most hearty thanks to Sir Aurel Stein for the very brilliant and exhaustive account he has given us of his labours in these barren and difficult regions of Central Asia—labours that are double-sided in a way I think few travellers' have been. The manner in which he first rushes over a series of glacier passes—and so many of them that I believe they would have given even the Alpine Club a surfeit—and then turns to explore buried cities and study the civilization of two thousand years ago is almost unique. We owe, I hold, special gratitude to travellers who go to the very ugly places of the Earth. It is a great temptation to most of us to go only to the beautiful places. When we see those

pictures of interminable sand-dunes and rocky hummocks torn asunder and laid bare by the most cruel winds, we feel that the man who for the sake of geographical knowledge and archæology would linger among them deserves a double meed of thanks. The results are extremely interesting, because we find that these desert-places once maintained a great population. This fact opens up many subjects of inquiry, historical, meteorological, changes of climate, migrations of peoples. We also find this charm in these particular trade-routes, that they were the old trade routes between Greeks and Romans and the farthest East. Sir Aurel Stein tells me that in those days the trade caravans must have gone not over the easiest routes but over hundreds of miles of desert in order to avoid the marauding tribes who were living where there was some possibility of human beings living happily.

We have followed, perhaps with some difficulty owing to its very complexity and richness, the account of his labours put forward by Sir Aurel Stein. We shall all read it with the deepest interest when published in our *Journal*, and we may hope that it will not be published without specimens of the appropriate illustrations which we have admired to-night. The perseverance with which Sir Aurel Stein photographed as he went along is, even in these days of photography, deserving of the highest praise. I will say no more, but offer to him the very hearty thanks of this meeting and all geographers in this country and the rest of Europe—except perhaps in Berlin, where they may grudge him some of his Buddhist frescoes; I am sure his reputation over Europe as one of the greatest travellers of modern times is now firmly established. Three times we have seen him here and each time he comes back with a richer harvest than he did the time before.

Sir Henry Trotter has kindly sent the following additional note for publication:—

I at one time took considerable interest in the geography of the Oxus below Kila Wamar. In the spring of 1874, when leaving Wakhan to return to India, I despatched the Munshi Abdul Subhan (an employé of the Survey of India) to follow the course of the river from Kila Panjah to Roshan and Shighnan. The account of his journey was published in the *R.G.S. Journal*, vol. 48, pp. 210-217. He followed the course of the river for 60 miles from Kila Panjah to Ishkashim, where turning northwards he followed the Oxus for nearly 100 miles further, passing successively through the districts of Gharan, Shighnan, and Roshan—countries which had hitherto only been known to us by name. He could not penetrate beyond Kila Wamar, the chief town of Roshan; but curiously enough another employé of the Survey, "The Havildar," who had been dispatched by the late General Walker from India in 1873 on an independent exploration, went from Kabul to Faizabad, the capital of Badakhshan, and thence started on a tour which combined with the Munshi's exploration to Kila Wamar entirely altered the map of that hitherto little-known portion of Central Asia. He visited the towns of Kolab, Khawaling, Sagri Dasht, Kila Khum (the capital of Darwaz), Kila Wanj, and Yaz-Ghulam. At Kila Khum the Havildar struck the Oxus (still called the Panjah), and his road for 40 miles lay on the right bank of the river—never previously mapped or, as far as I know, visited by any explorer. At Yaz-Ghulam, the eastern frontier village of Darwaz, he was unfortunately turned back—just as he had got within a long day's march of the Munshi's farthest point at Kila Wamar. The Havildar, who was ignorant of what the Munshi had done only a few weeks previously to his own arrival at Yaz-Ghulam, was most anxious to complete his own work. In order to do so he went back

by Kolab to Ishkashm, and endeavoured to make a survey down the river to Vaz-Ghulam; but he was again stopped, this time at the southern frontier of Shighnan, and was prevented from carrying out his intentions. Thus there was a gap between the explorations of the Havildar and the Munshi, the existence of which was much regretted; fortunately the missing link was a short one—some 20 miles as the crow flies. A Russian scientific mission visited these parts ten years later, in 1883; but the map then compiled differs greatly from their latest published map of 1910, which again differs from an intermediate map published in 1900. I fancy that accurate surveys of these little-known countries have still to be made.
